FUND SUMMARY—CLOUGH HEDGED EQUITY ETF

Investment Objective

The Clough Hedged Equity ETF (the “Fund”) seeks long-term capital appreciation while minimizing volatility.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses	
(expenses that you pay each year as a percentage of the value of your investment)	
Management Fees.....	1.35%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	1.23%
Acquired Fund Fees and Expenses ²	0.01%
Total Annual Fund Operating Expenses	2.59%

¹ “Other Expenses” include broker and interest expenses. Broker and interest expenses are borne by the Fund separately from the management fee paid to the Adviser.

² Acquired Fund Fees and Expenses (“AFFE”) are the indirect costs of investing in other investment companies. Total Annual Fund Operating Expenses do not correlate to the expense ratios in the Fund’s Financial Highlights because the Financial Highlights include only the direct operating expenses incurred by the Fund and exclude AFFE.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$262

3 Years: \$805

5 Years: \$1,375

10 Years: \$2,925

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. For the fiscal year ended October 31, 2024, the Predecessor Fund’s (as defined below) portfolio turnover rate was 509% of the average value of its portfolio.

Principal Investment Strategies of the Fund

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by purchasing securities that Clough Capital Partners L.P. (the “Adviser”), the Fund’s investment adviser, believes:

- have above-average financial characteristics such as return on invested capital, profit margins, debt-to-equity ratio, or revenue and earnings growth as identified in financial statements, relative to the broader equity market;
- are undervalued based on valuation metrics such as (i) enterprise value to sales, (ii) enterprise value to earnings before interest, taxes, depreciation, and amortization, or (iii) price to earnings ratios; or
- have higher growth potential as indicated by sales growth, earnings growth, or free cash flow growth.

The Fund primarily invests in U.S.-listed equity securities and sponsored depositary receipts, including American Depositary Receipts (“ADRs”), European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”). While the Fund’s equity exposure strategy focuses on investments in U.S. equity securities, the Fund’s strategy also includes investments in companies organized in the U.S. but deriving revenue from international markets, including emerging markets. The Fund will make investments in emerging markets, which the Fund defines as countries included in the MSCI Emerging Markets Index (“MSCI”), using U.S.-listed securities of companies domiciled in MSCI countries. A short sale is a transaction in which the Fund sells a security it does not own, typically in anticipation of a decline in the market price of that security based on an analysis of market expectations, valuation multiples, or the likelihood of a contraction in the stock’s valuation multiple. While the Adviser seeks companies it believes will outperform over a full market cycle (typically 5-11 years), the Fund may experience higher portfolio turnover in the short term as the Fund responds to changing market conditions or when the Adviser identifies new opportunities.

The Adviser's investment process is built on seeking to identify and capitalize on industry or economic trends that other investors have not yet recognized, while maintaining overall portfolio volatility that is lower than that experienced by the broader market. The Fund views the Bloomberg World Large, Mid, & Small Cap Equal Weight Total Return Index (“WLSEQT”) as a representation of the broader market because WLSEQT includes a broad spectrum of global equity securities across various market capitalizations. The Adviser believes that it can identify industry or economic trends by analyzing industry and economic related information such as capital flows that effect natural resource scarcity, technological innovations which have the potential to disrupt traditional industries, impacts of demographic shifts, and changes in profit or credit cycles. The Adviser then interprets the information analyzed to identify emerging patterns or changes in various sectors of the economy and develops a strategy for the Fund to allocate its capital into investible securities.

The Adviser identifies investible securities through rigorous research, including analysis of public company filings, customer preferences, relevant supply chains, and additional publicly available company information. The investment process focuses on a number of significant global investment themes identified by the Adviser through its research process. Global investment themes include industry or economic trends that the Adviser believes will significantly impact multiple sectors or regions of the global economy. The Adviser believes that the Fund can invest in companies affected by an attractive global investment theme which the Adviser anticipates will result in positive investment returns. For instance, an attractive global investment theme could be the emergence of artificial intelligence (AI) as a transformative technology. The Adviser might identify this theme by observing increased investment in AI research and development, analyzing the growing demand for advanced semiconductor chips, and studying the proliferation of AI-powered applications across various industries. This theme could result in far-reaching implications for semiconductor manufacturers, companies throughout the semiconductor supply chain, consumer electronics producers, software developers, and numerous other sectors that stand to benefit from or be negatively impacted by AI technology.

When such a theme is identified, the Adviser then conducts bottom-up research to find specific companies that are well-positioned to benefit from this trend. In the AI example, this research might uncover potential investments in leading chip designers, manufacturers of specialized AI hardware, cloud computing providers offering AI services, or software companies developing innovative AI applications. This approach allows the Fund to invest in the global trends identified by selecting individual securities that the Adviser believes will offer the best potential for positive returns.

Individual security positions are selected after an evaluation of various company characteristics, such as an assessment of a company's market position compared to its competitors, which would involve analyzing company specific factors including market share, product differentiation, and brand strength. The Adviser also evaluates the quality of company management by examining its track record, strategic decisions, and ability to execute business plans effectively. The company selection assessment also includes analyzing a company's financial performance metrics, reviewing a company's public statements and interviews, and evaluating a company's reputation within its industry. The Adviser also analyzes a company's earnings, cash flow, and balance sheet to assess its financial stability and potential for positive investment returns. In addition, the Adviser evaluates whether a company's market share, profitability and market valuation is justified and likely to persist over time, compared to both its own and peer historical metrics. The evaluation process involves analysis of various financial ratios and metrics, including price-to-earnings, earnings per share, return on equity, and debt-to-equity ratios, to determine if a company's stock price accurately reflects its fundamental value and growth potential.

The Fund's portfolio construction is driven by the Adviser's bottom-up research process, which seeks to identify the most compelling investment opportunities across various sectors. The Fund's equity stock position concentrations will be higher in sectors such as energy, technology, consumer, industrial, and healthcare at times, and the Fund does not adhere to strict sector weighting parameters. This approach allows the Fund to invest in companies that have the greatest potential for returns, regardless of sector. The Fund will typically maintain a diversified portfolio of 30 to 50 long positions and 20 to 50 short positions. This range allows for meaningful exposure to high-conviction ideas while maintaining a level of diversification to manage overall portfolio risk. Under normal circumstances, at least 80% of the Fund's net assets, plus borrowings for investment purposes, will be invested long or short in equity securities, including common stocks and sponsored depositary receipts.

The Fund employs a hedging strategy that utilizes options and index futures to manage risk and enhance returns. The Fund will generally maintain a net long exposure of between 30%-70% of its net assets. The Fund will buy put options or write (sell) call options on securities it believes are overvalued, aiming to profit from potential price declines or to protect existing long positions. Conversely, the Fund will buy call options or write put options on securities identified through the Adviser's research process as undervalued, seeking to benefit from potential price appreciation or to gain exposure to attractive investments at a lower initial cost. In addition to options, the Fund will use futures contracts on stock indices, which allow the Fund to invest in one instrument to gain exposure to a group of companies that a futures contract represents, rather than investing in each individual company. The Fund will also use futures contracts to hedge portfolio risks, such as buying or selling an index future when the broader market appears to be overbought based on evaluation of historical valuation metrics. Investments in options and futures allow the Fund to respond to changing market conditions or to implement investment views without directly buying or selling the underlying securities. The Adviser employs a flexible approach to determine the optimal duration for each option or futures instrument that the Fund invests in, and option or futures position durations are generally less than two years. The duration decision is based on careful evaluation of several factors, including transaction costs, the timing of potential catalysts that may alter the broader markets stock prices, and other relevant considerations typical in derivative transactions. The Fund's goal of investing in options and futures is to strike a balance between hedging portfolio risks or capturing desired market exposure and managing the costs and risks associated with such instruments. This flexible approach allows the Fund to adapt its derivative strategy to changing market conditions and specific investment opportunities.

The use of options and futures strategies will be used to hedge and enhance the returns of the Fund's core equity portfolio, and such strategies will not be used to replace the core equity portfolio.

Principal Risks of Investing in the Fund

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with the risks of other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund’s net asset value (“NAV”), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund’s NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia’s invasion of Ukraine, acts of terrorism, public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets.
- **Equity Market Risk.** The equity securities held in the Fund’s portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **Investment Themes Risk.** The Fund’s investment program depends on the Adviser’s identification and development of global or regional investment themes, and the Fund’s performance may suffer if such themes, which can be inherently challenging to identify, are not well identified, or do not unfold as anticipated. Failure to correctly identify or develop the themes that will guide the Fund’s portfolio investments, or the failure of a theme to unfold in the way the Adviser anticipates, may result from many causes, including the following: governments or others may decide to oppose or delay certain economic, social or political developments that are the basis of investment themes; demographic or economic data necessary to understand correctly the way in which certain themes may unfold in some countries may be incorrect or incomplete; development of themes and their longevity may require attention to subtle cultural factors not always apparent to outside observers; or social and political changes or natural disasters in some parts of the world may alter the underlying conditions or affect the availability of natural resources necessary to an emerging theme.

- **Security Selection Risk.** The success of the Fund’s investment strategies depends, in part, on the effectiveness and implementation of the Adviser’s analysis and methodology with respect to security selection. The securities in the Fund’s portfolio may decline in value. The Adviser’s analysis and portfolio management practices may not achieve the desired results.
- **Counterparty Risk.** A financial institution or other counterparty with whom the Fund does business, or that underwrites, distributes, or guarantees any investments or contracts that the Fund owns or is otherwise exposed to, including the counterparty to an OTC derivatives contract, may decline in financial health and become unable to honor its commitments. This could cause losses for the Fund or could delay the return or delivery of collateral or other assets to the Fund.
- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, or the Fund’s other service providers, market makers, Authorized Participants (“APs”), the Fund’s primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund’s business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Depository Receipts Risk.** The Fund may hold the securities of non-U.S. companies in the form of depository receipts, including ADRs, EDRs and GDRs. ADRs are negotiable certificates issued by a U.S. financial institution that represent a specified number of shares in a foreign stock and trade on a U.S. national securities exchange, such as the New York Stock Exchange (“NYSE”). ADRs are U.S. dollar denominated. EDRs and GDRs are similar to ADRs, but are shares of foreign based corporations generally issued by international banks in one or more markets around the world. EDRs and GDRs are typically U.S. dollar denominated but may be denominated in a foreign currency. Depository receipts may be unregistered and unlisted. Depository receipts involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of depository receipts trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the depository receipts may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares.
- **Derivatives Risk.** The Fund’s use of derivatives, including options, may reduce the Fund’s returns and/or increase the volatility of the Fund’s net asset value. Derivatives may be difficult to value and may at times be highly illiquid, and the Fund may not be able to close out or sell a derivative position at a particular time or at an anticipated price. Derivative investments will typically increase the Fund’s exposure to principal risks to which it is otherwise exposed, and may expose the Fund to additional risks, including liquidity risk, interest rate risk, counterparty risk, equity market risk, credit risk and management risk.

- **Emerging Markets Risk.** Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Adviser’s ability to evaluate local companies and impact the Fund’s performance. Foreign markets ADRs and ETFs involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of ADRs and ETFs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs and ETFs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares.
- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading Risk.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than the Shares.
- **Foreign Markets Risk.** Investments in ADRs and ETFs that provide exposure to non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, the value of non-U.S. securities may be subject to risk of decline due to foreign currency fluctuations or to political or economic instability. Investments in ADRs also may be subject to withholding or other taxes and may be indirectly subject to additional trading, settlement, custodial, and operational risks. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments. Foreign markets ADRs and ETFs involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of ADRs and ETFs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs and ETFs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares. This, in turn, could lead to differences in the market price of the ETF's and ADR shares and the underlying value of those shares.

- **Growth Investing Risk.** Growth stocks can be volatile for several reasons. Since those companies usually invest a high portion of earnings in their businesses, they may lack the dividends of value stocks that can cushion stock prices in a falling market. The prices of growth stocks are based largely on projections of the issuer's future earnings and revenues. If a company's earnings or revenues fall short of expectations, its stock price may fall dramatically.
- **Hedging Risk.** Options used by the Fund to reduce volatility and generate returns may not perform as intended. There can be no assurance that the Fund's option strategy will be effective. It may expose the Fund to losses, e.g., option premiums, to which it would not have otherwise been exposed. Further, the option strategy may not fully protect the Fund against declines in the value of its portfolio securities.
- **Liquidity Risk.** Liquidity risk refers to the possibility that the Fund may not be able to buy or sell a security at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash, or decline an investment opportunity, any of which could have a negative effect on the Fund's performance. Infrequent trading of securities also may lead to an increase in their price volatility. While CLO debt tranches in which the Fund seeks to invest are expected to be supported by a secondary market, it is possible that they may be characterized as illiquid securities under adverse market conditions resulting in a limited market for the resale of CLO debt tranches or affected by the liquidity in the fixed income market, generally.
- **Long/Short Risk.** The Fund seeks long exposure to certain securities and short exposure to certain other securities. There is no guarantee that the returns on the Fund's long or short positions will produce positive returns, and the Fund could lose money if either or both the Fund's long and short positions produce negative returns.
- **Management Risk.** The Adviser continuously evaluates the Fund's holdings, purchases and sales with a view to achieving the Fund's investment objective. However, achievement of the stated investment objective cannot be guaranteed. The Adviser's judgment about the markets, the economy, or companies may not anticipate actual market movements, economic conditions or company performance, and these factors may affect the return on your investment.
- **Market Capitalization Risk.**
 - *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.

- o *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of midcapitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
 - o *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **Options Risk.** The prices of options may change rapidly over time and do not necessarily move in tandem with the price of the underlying securities. Selling call options reduces the Fund's ability to profit from increases in the value of the Fund's equity portfolio, and purchasing put options may result in the Fund's loss of premiums paid in the event that the put options expire unexercised. To the extent that the Fund reduces its put option holdings relative to the number of call options sold by the Fund, the Fund's ability to mitigate losses in the event of a market decline will be reduced.
 - **Portfolio Turnover Risk.** Because the Fund may "turn over" some or all of its portfolio frequently, the Fund may incur high levels of transaction costs, performance that is lower than expected and potentially greater tax exposure.
 - **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.
 - o *Consumer Sectors Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the Consumer Staples Sector, such as companies that produce or sell food, beverage, and drug retail or other household items, may be adversely impacted by changes in global and economic conditions, rising energy prices, and changes in the supply or price of commodities. Companies in the Consumer Discretionary Sector, such as automobile, textile, retail, and media companies, depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.
 - o *Energy Sector Risk.* The Energy Sector includes companies operating in the exploration and production, refining and marketing, and storage and transportation of oil and gas and coal and consumable fuels. It also includes companies that offer oil and gas equipment and related services. The Fund is subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the Energy Sector. The performance of companies operating in the Energy Sector is closely tied to the price and supply of energy fuels and international political events.

- o *Health Care Sector Risk.* Companies in the Health Care Sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, an increased emphasis on the delivery of healthcare through outpatient services, loss or impairment of intellectual property rights and litigation regarding product or service liability.
 - o *Industrials Sector Risk.* Issuers in the Industrials Sector are affected by supply and demand, both for their specific product or service and for Industrials Sector products in general. The products of such issuers may face obsolescence due to rapid technological developments and frequent new product introduction. Government regulations, world events, economic conditions and exchange rates affect the performance of companies in the Industrials Sector. Issuers in the Industrials Sector may be adversely affected by liability for environmental damage, product liability claims and exchange rates. The Industrials Sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors.
 - o *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.
- **Short Selling Risk.** Short selling involves the sale of securities borrowed from a third party. The short seller profits if the borrowed security's price declines. If a shorted security increases in value, a higher price must be paid to buy the stock back to cover the short sale, resulting in a loss. The Fund may incur expenses related to short selling, including compensation, interest or dividends, and transaction costs payable to the security lender, whether the price of the shorted security increases or decreases. The amount the Fund could lose on a short sale is theoretically unlimited. Short selling also involves counterparty risk – the risk associated with the third-party ceasing operations or failing to sell the security back.
 - **Tax Risk.** The writing of options by the Fund may significantly reduce or eliminate its ability to make distributions eligible to be treated as qualified dividend income. Options entered into by the Fund may also be subject to the federal tax rules applicable to straddles under the Internal Revenue Code of 1986, as amended (the "Code"). If positions held by the Fund were treated as "straddles" for federal income tax purposes, or the Fund's risk of loss with respect to a position was otherwise diminished as set forth in Treasury regulations, dividends on stocks that are a part of such positions would not constitute qualified dividend income subject to such favorable income tax treatment in the hands of non-corporate shareholders or eligible for the dividends received deduction for corporate shareholders. In addition, generally, straddles are subject to certain rules that may affect the amount, character, and timing of the Fund's recognition of gains and losses with respect to straddle positions.

- **Value Investing Risk.** Because the Fund may utilize a value style of investing, the Fund could suffer losses or produce poor results relative to other funds, even in a rising market, if the Adviser’s assessment of a company’s value or prospects for exceeding earnings expectations or market conditions is incorrect.

Performance

The Fund acquired all of the assets and liabilities of the Clough Hedged Equity ETF, a series of Listed Funds Trust (the “Predecessor Fund”), in a tax-free reorganization on January 17, 2025. In connection with this acquisition, shares of the Predecessor Fund were exchanged for shares of the Fund. The Predecessor Fund had an investment objective and strategies that were, in all material respects, the same as those of the Fund, and was managed in a manner that, in all material respects, complied with the investment guidelines and restrictions of the Fund. The Fund is a continuation of the Predecessor Fund, and therefore, the performance information includes the performance of the Predecessor Fund.

The following performance information indicates some of the risks of investing in the Fund by showing how the Predecessor Fund’s performance has varied over time. The bar chart shows the Predecessor Fund’s performance for the calendar years ended December 31. The table illustrates how the Predecessor Fund’s average annual returns for the 1-year and since inception periods compare with those of the Bloomberg US Treasury 0-1 Year Maturity Index, which reflects a broad measure of market performance. The table also shows how the Predecessor Fund’s performance compares to the 50% Bloomberg US Treasury 0-1 Year Maturity Index/50% Bloomberg World Large, Mid and Small Cap Equal Weighted Blend Index and the Wilshire Liquid Alternative Equity Hedge Total Return Index, additional comparative indices that represent the asset classes in which the Fund invests. Previously, from the Predecessor Fund’s inception to August 28, 2023, the Predecessor Fund was advised by Changebridge Capital, LLC. The Predecessor Fund’s past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund’s website at www.cloughetfs.com.

During the period shown in the bar chart, the best performance for a quarter was 14.01% (for the quarter ended March 31, 2021) and the worst performance was -14.07% (for the quarter ended June 30, 2022).

**Average Annual Total Returns
(for the Periods Ended December 31, 2023)**

	One Year	Since Inception 11/12/20
Return Before Taxes	-2.78%	0.94%
Return After Taxes on Distributions	-2.88%	0.91%
Return After Taxes on Distributions and Sale of Fund Shares	-1.58%	0.72%
Bloomberg World Large, Mid & Small Cap Equal Weight Total Return Index (reflects no deductions for fees, expenses, or taxes)	13.95%	5.28%
50% Bloomberg US Treasury 0-1 Year Maturity Index/50% Bloomberg World Large, Mid and Small Cap Equal Weighted Blend Index¹ (reflects no deductions for fees, expenses, or taxes)	8.62%	5.71%

1. The 50% Bloomberg US Treasury 0-1 Year Maturity Index/50% Bloomberg World Large, Mid and Small Cap Equal Weighted Blend Index consists of 50% Bloomberg US Treasury 0-1 Year Maturity Index and 50% Bloomberg World Large, Mid and Small Cap Equal Weighted Index is the Fund’s secondary benchmark. The Bloomberg US Treasury 0-1 Year Maturity Index was created by Bloomberg and serves as a cash proxy. The 50% Bloomberg World Large, Mid and Small Cap Equal Weighted Index is an equal weighted equity benchmark that covers 99% market cap of the measured market.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the periods covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax deferred arrangements such as an individual retirement account (“IRA”) or other tax-advantaged accounts. In certain cases, the figure representing “Return After Taxes on Distributions and Sale of Shares” may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

Management

Adviser: Clough Capital Partners L.P.

Portfolio Manager: Vincent Lorusso is the Fund’s portfolio manager and is primarily responsible for the day-to-day management of the Fund’s portfolio. Mr. Lorusso has been the portfolio manager of the Fund since its inception in November 2020.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the “bid” price) and the lowest price a seller is willing to accept for Shares (the “ask” price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the “bid-ask spread.”

Recent information regarding the Fund’s NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund’s website at www.cloughetfs.com.

Tax Information

The Fund’s distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts. See “Dividends, Distributions, and Taxes – Dividends and Distributions” for more information.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

FUND SUMMARY— CLOUGH SELECT EQUITY ETF

Investment Objective

The Clough Select Equity ETF (the “Fund”) seeks capital appreciation and lower volatility than the broader market.

Fees and Expenses of the Fund

The following table describes the fees and expenses you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.**

Annual Fund Operating Expenses¹	
(expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.85%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ²	0.00%
Acquired Fund Fees and Expenses	0.01%
Total Annual Fund Operating Expenses	0.86%

¹ “Other Expenses” include broker and interest expenses. Broker and interest expenses are borne by the Fund separately from the management fee paid to the Adviser.

² Acquired Fund Fees and Expenses (“AFFE”) are the indirect costs of investing in other investment companies. Total Annual Fund Operating Expenses do not correlate to the expense ratios in the Fund’s Financial Highlights because the Financial Highlights include only the direct operating expenses incurred by the Fund and exclude AFFE.

Expense Example

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. The Example does not take into account brokerage commissions that you may pay on your purchases and sales of Shares. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year: \$88

3 Years: \$274

5 Years: \$477

10 Years: \$1,061

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in the Total Annual Fund Operating Expenses or in the Example, affect the Fund’s performance. For the fiscal year ended October 31, 2024, the Predecessor Fund’s portfolio turnover rate was 428% of the average value of its portfolio.

Principal Investment Strategies of the Fund

Clough Select Equity ETF

The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by purchasing securities that Clough Capital Partners L.P. (the “Adviser”), the Fund’s investment adviser, believes:

- have above-average financial characteristics such as return on invested capital, profit margins, debt-to-equity ratio, or revenue and earnings growth as identified in financial statements, relative to the broader equity market;
- are undervalued based on valuation metrics such as (i) enterprise value to sales, (ii) enterprise value to earnings before interest, taxes, depreciation, and amortization, or (iii) price to earnings ratios; or
- have higher growth potential as indicated by sales growth, earnings growth, or free cash flow growth.

The Fund primarily invests in U.S.-listed equity securities and sponsored depositary receipts, including American Depositary Receipts (“ADRs”), European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”). While the Fund’s equity exposure strategy focuses on investments in U.S. equity securities, the Fund’s strategy also includes investments in companies organized in the U.S. but deriving revenue from international markets, including emerging markets. The Fund will make investments in emerging markets, which the Fund defines as countries included in the MSCI Emerging Markets Index (“MSCI”), using U.S.-listed securities of companies domiciled in MSCI countries. While the Adviser seeks companies it believes will outperform over a full market cycle (typically 5-11 years), the Fund may experience higher portfolio turnover in the short term as the Fund responds to changing market conditions or when the Adviser identifies new opportunities.

The Adviser's investment process is built on seeking to identify and capitalize on industry or economic trends that other investors have not yet recognized. The Adviser believes that it can identify industry or economic trends by analyzing industry and economic related information such as capital flows that effect natural resource scarcity, technological innovations which have the potential to disrupt traditional industries, impacts of demographic shifts, and changes in profit or credit cycles. The Adviser then interprets the information analyzed to identify emerging patterns or changes in various sectors of the economy and develops a strategy for the Fund to allocate its capital into investible securities.

The Adviser identifies investible securities through rigorous research, including analysis of public company filings, customer preferences, relevant supply chains, and additional publicly available company information. The investment process focuses on a number of significant global investment themes identified by the Adviser through its research process. Global investment themes include industry or economic trends that the Adviser believes will significantly impact multiple sectors or regions of the global economy. The Adviser believes that the Fund can invest in companies affected by an attractive global investment theme which the Adviser anticipates will result in positive investment returns. For instance, an attractive global investment theme could be the emergence of artificial intelligence (AI) as a transformative technology. The Adviser might identify this theme by observing increased investment in AI research and development, analyzing the growing demand for advanced semiconductor chips, and studying the proliferation of AI-powered applications across various industries. This theme could result in far-reaching implications for semiconductor manufacturers, companies throughout the semiconductor supply chain, consumer electronics producers, software developers, and numerous other sectors that stand to benefit from or be negatively impacted by AI technology.

When such a theme is identified, the Adviser then conducts bottom-up research to find specific companies that are well-positioned to benefit from this trend. In the AI example, this research might uncover potential investments in leading chip designers, manufacturers of specialized AI hardware, cloud computing providers offering AI services, or software companies developing innovative AI applications. This approach allows the Fund to invest in the global trends identified by selecting individual securities that the Adviser believes will offer the best potential for positive returns. Individual security positions are selected after an evaluation of various company characteristics, such as an assessment of a company's market position compared to its competitors, which would involve analyzing company specific factors including market share, product differentiation, and brand strength. The Adviser also evaluates the quality of company management by examining its track record, strategic decisions, and ability to execute business plans effectively. The company selection assessment also includes analyzing a company's financial performance metrics, reviewing a company's public statements and interviews, and evaluating a company's reputation within its industry. The Adviser also analyzes a company's earnings, cash flow, and balance sheet to assess its financial stability and potential for positive investment returns. In addition, the Adviser evaluates whether a company's market share, profitability and market valuation is justified and likely to persist over time, compared to both its own and peer historical metrics. The evaluation process involves analysis of various financial ratios and metrics, including price-to-earnings, earnings per share, return on equity, and debt-to-equity ratios, to determine if a company's stock price accurately reflects its fundamental value and growth potential.

The Fund's portfolio construction is driven by the Adviser's bottom-up research process, which seeks to identify the most compelling investment opportunities across various sectors. The Fund's equity stock position concentrations will be higher in sectors such as energy, technology, consumer, industrial, and healthcare at times, and the Fund does not adhere to strict sector weighting parameters. This approach allows the Fund to invest in companies that have the greatest potential for returns, regardless of sector. The Fund will typically maintain a diversified portfolio of 30 to 50 long positions and 20 to 50 short positions. This range allows for meaningful exposure to high-conviction ideas while maintaining a level of diversification to manage overall portfolio risk. Under normal circumstances, at least 80% of the Fund's net assets, plus borrowings for investment purposes, will be invested in equity securities, including common stocks and sponsored depositary receipts.

Principal Risks of Investing in the Fund

The principal risks of investing in the Fund are summarized below. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with the risks of other funds. Each risk summarized below is considered a "principal risk" of investing in the Fund, regardless of the order in which it appears. As with any investment, there is a risk that you could lose all or a portion of your investment in the Fund. Some or all of these risks may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return and/or ability to meet its investment objective. The following risks could affect the value of your investment in the Fund:

- **Market Risk.** The trading prices of securities and other instruments fluctuate in response to a variety of factors. These factors include events impacting the entire market or specific market segments, such as political, market and economic developments, as well as events that impact specific issuers. The Fund's NAV and market price, like security and commodity prices generally, may fluctuate significantly in response to these and other factors. As a result, an investor could lose money over short or long periods of time. U.S. and international markets have experienced significant periods of volatility in recent years due to a number of these factors, including the impact of the COVID-19 pandemic and related public health issues, growth concerns in the U.S. and overseas, uncertainties regarding interest rates, trade tensions and the threat of tariffs imposed by the U.S. and other countries. In addition, local, regional or global events such as war, including Russia's invasion of Ukraine, acts of terrorism, public health issues, recessions, rising inflation, or other events could have a significant negative impact on the Fund and its investments. These developments as well as other events could result in further market volatility and negatively affect financial asset prices, the liquidity of certain securities and the normal operations of securities exchanges and other markets.
- **Equity Market Risk.** The equity securities held in the Fund's portfolio may experience sudden, unpredictable drops in value or long periods of decline in value. This may occur because of factors that affect securities markets generally or factors affecting specific issuers, industries, sectors or companies in which the Fund invests. Common stocks are generally exposed to greater risk than other types of securities, such as preferred stocks and debt obligations, because common stockholders generally have inferior rights to receive payment from issuers.
- **Investment Themes Risk.** The Fund's investment program depends on the Adviser's identification and development of global or regional investment themes, and the Fund's performance may suffer if such themes, which can be inherently challenging to identify, are not well identified, or do not unfold as anticipated. Failure to correctly identify or develop the themes that will guide the Fund's portfolio investments, or the failure of a theme to unfold in the way the Adviser anticipates, may result from many causes, including the following: governments or others may decide to oppose or delay certain economic, social or political developments that are the basis of investment themes; demographic or economic data necessary to understand correctly the way in which certain themes may unfold in some countries may be incorrect or incomplete; development of themes and their longevity may require attention to subtle cultural factors not always apparent to outside observers; or social and political changes or natural disasters in some parts of the world may alter the underlying conditions or affect the availability of natural resources necessary to an emerging theme.

- **Security Selection Risk.** The success of the Fund’s investment strategies depends, in part, on the effectiveness and implementation of the Adviser’s analysis and methodology with respect to security selection. The securities in the Fund’s portfolio may decline in value. The Adviser’s analysis and portfolio management practices may not achieve the desired results.
- **Cybersecurity Risk.** Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause the Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of the Fund, the Adviser, or the Fund’s other service providers, market makers, Authorized Participants (“APs”), the Fund’s primary listing exchange, or the issuers of securities in which the Fund invests have the ability to disrupt and negatively affect the Fund’s business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders.
- **Depository Receipts Risk.** The Fund may hold the securities of non-U.S. companies in the form of depository receipts, including ADRs, EDRs and GDRs. ADRs are negotiable certificates issued by a U.S. financial institution that represent a specified number of shares in a foreign stock and trade on a U.S. national securities exchange, such as the New York Stock Exchange (“NYSE”). ADRs are U.S. dollar denominated. EDRs and GDRs are similar to ADRs, but are shares of foreign-based corporations generally issued by international banks in one or more markets around the world. EDRs and GDRs are typically U.S. dollar denominated but may be denominated in a foreign currency. Depository receipts may be unregistered and unlisted. Depository receipts involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies , and, because the underlying securities of depository receipts trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the depository receipts may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares.
- **Emerging Markets Risk.** Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Adviser’s ability to evaluate local companies and impact the Fund’s performance. Foreign markets ADRs and ETFs involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of ADRs and ETFs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs and ETFs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares.

- **ETF Risks.** The Fund is an ETF and, as a result of its structure, it is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants (“APs”). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Due to the costs of buying or selling Shares, including brokerage commissions imposed by brokers and bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.
 - *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate the Fund’s NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility, periods of steep market declines, and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant.
 - *Trading Risk.* Although Shares are listed for trading on the NYSE Arca, Inc. (the “Exchange”) and may be traded on U.S. exchanges other than the Exchange, there can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of the Fund’s underlying portfolio holdings, which can be significantly less liquid than the Shares.

- **Foreign Markets Risk.** Investments in ADRs and ETFs that provide exposure to non-U.S. securities involve certain risks that may not be present with investments in U.S. securities. For example, the value of non-U.S. securities may be subject to risk of decline due to foreign currency fluctuations or to political or economic instability. Investments in ADRs also may be subject to withholding or other taxes and may be indirectly subject to additional trading, settlement, custodial, and operational risks. These and other factors can make investments in the Fund more volatile and potentially less liquid than other types of investments. Foreign markets ADRs and ETFs involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of ADRs and ETFs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs and ETFs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares. This, in turn, could lead to differences in the market price of the ETF's and ADR shares and the underlying value of those shares.

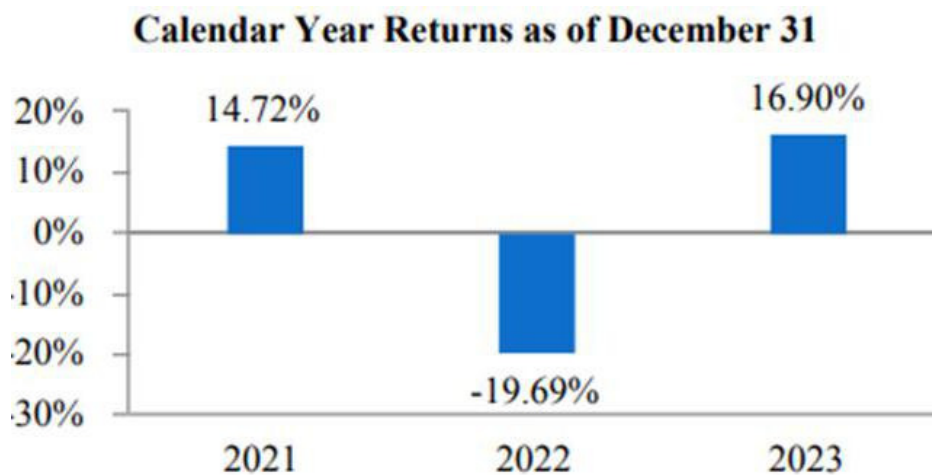

- **Growth Investing Risk.** Growth stocks can be volatile for several reasons. Since those companies usually invest a high portion of earnings in their businesses, they may lack the dividends of value stocks that can cushion stock prices in a falling market. The prices of growth stocks are based largely on projections of the issuer’s future earnings and revenues. If a company’s earnings or revenues fall short of expectations, its stock price may fall dramatically.
- **Liquidity Risk.** In certain situations, it may be difficult or impossible to sell an investment in an orderly fashion at an acceptable price.
- **Management Risk.** The Adviser continuously evaluates the Fund’s holdings, purchases and sales with a view to achieving the Fund’s investment objective. However, achievement of the stated investment objective cannot be guaranteed. The Adviser’s judgment about the markets, the economy, or companies may not anticipate actual market movements, economic conditions or company performance, and these factors may affect the return on your investment.
- **Market Capitalization Risk.**
 - *Large-Capitalization Investing.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and therefore subject to slower growth during times of economic expansion. Large-capitalization companies may also be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
 - *Mid-Capitalization Investing.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole.
 - *Small-Capitalization Investing.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **Portfolio Turnover Risk.** Because the Fund may “turn over” some or all of its portfolio frequently, the Fund may incur high levels of transaction costs, performance that is lower than expected and potentially greater tax exposure.
- **Sector Risk.** To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.
 - *Consumer Sectors Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the Consumer Staples Sector, such as companies that produce or sell food, beverage, and drug retail or other household items, may be adversely impacted by changes in global and economic conditions, rising energy prices, and changes in the supply or price of commodities. Companies in the Consumer Discretionary Sector, such as automobile, textile, retail, and media companies, depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.

- o *Energy Sector Risk.* The Energy Sector includes companies operating in the exploration and production, refining and marketing, and storage and transportation of oil and gas and coal and consumable fuels. It also includes companies that offer oil and gas equipment and related services. The Fund is subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the Energy Sector. The performance of companies operating in the Energy Sector is closely tied to the price and supply of energy fuels and international political events.
 - o *Health Care Sector Risk.* Companies in the Health Care Sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines, an increased emphasis on the delivery of healthcare through outpatient services, loss or impairment of intellectual property rights and litigation regarding product or service liability.
 - o *Industrials Sector Risk.* Issuers in the Industrials Sector are affected by supply and demand, both for their specific product or service and for Industrials Sector products in general. The products of such issuers may face obsolescence due to rapid technological developments and frequent new product introduction. Government regulations, world events, economic conditions and exchange rates affect the performance of companies in the Industrials Sector. Issuers in the Industrials Sector may be adversely affected by liability for environmental damage, product liability claims and exchange rates. The Industrials Sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors.
 - o *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability.
- **Value Investing Risk.** Because the Fund may utilize a value style of investing, the Fund could suffer losses or produce poor results relative to other funds, even in a rising market, if the Adviser's assessment of a company's value or prospects for exceeding earnings expectations or market conditions is incorrect.

Performance

The Fund acquired all of the assets and liabilities of the Clough Select Equity ETF, a series of Listed Funds Trust (the “Predecessor Fund”), in a tax-free reorganization on January 17, 2025. In connection with this acquisition, shares of the Predecessor Fund were exchanged for shares of the Fund. The Predecessor Fund had an investment objective and strategies that were, in all material respects, the same as those of the Fund, and was managed in a manner that, in all material respects, complied with the investment guidelines and restrictions of the Fund. The Fund is a continuation of the Predecessor Fund, and therefore, the performance information includes the performance of the Predecessor Fund.

The following performance information indicates some of the risks of investing in the Fund by showing how the Predecessor Fund’s performance has varied over time. The bar chart shows the Predecessor Fund’s performance for the calendar years ended December 31. The table illustrates how the Predecessor Fund’s average annual returns for the 1-year and since inception periods compare with those of the primary index which is the Bloomberg World Large, Mid and Small Cap equal weighted index. The table also shows how the Predecessor Fund’s performance compares to the S&P 500® Total Return Index, another comparative index that represents the asset classes in which the Fund invests. From the Predecessor Fund’s inception to August 28, 2023, the Predecessor Fund was advised by Changebridge Capital, LLC. The Predecessor Fund’s past performance, before and after taxes, does not necessarily indicate how it will perform in the future. Updated performance information is available on the Fund’s website at www.cloughetfs.com.

During the period shown in the bar chart, the best performance for a quarter was 20.41% (for the quarter ended March 31, 2021) and the worst performance was -18.94% (for the quarter ended June 30, 2022).

Average Annual Total Returns (for the Periods Ended December 31, 2023)

	<u>One Year</u>	<u>Since Inception (11/12/20)</u>
Return Before Taxes	16.90%	8.26%
Return After Taxes on Distributions	16.48%	8.10%
Return After Taxes on Distributions and Sale of Predecessor Fund Shares	10.29%	6.41%
Bloomberg World Large, Mid and Small Cap Equal Weighted Index (reflects no deductions for fees, expenses, or taxes)	13.95%	5.28%
S&P 500® Total Return Index (reflects no deductions for fees, expenses, or taxes)	26.29%	11.75%

After-tax returns are calculated using the historical highest individual federal marginal income tax rates during the periods covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts. In certain cases, the figure representing "Return After Taxes on Distributions and Sale of Shares" may be higher than the other return figures for the same period. A higher after-tax return results when a capital loss occurs upon redemption and provides an assumed tax deduction that benefits the investor.

Management

Adviser: Clough Capital Partners L.P.

Portfolio Manager: Vincent Lorusso is the Fund's portfolio manager and is primarily responsible for the day-to-day management of the Fund's portfolio. Mr. Lorusso has been the portfolio manager of the Fund since its inception in November 2020.

Purchase and Sale of Shares

The Fund issues and redeems Shares at NAV only in large blocks known as "Creation Units," which only APs (typically, broker-dealers) may purchase or redeem. The Fund generally issues and redeems Creation Units in exchange for a portfolio of securities and/ or a designated amount of U.S. cash.

Shares are listed on the Exchange, and individual Shares may only be bought and sold in the secondary market through a broker or dealer at market prices, rather than NAV. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (premium) or less than NAV (discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (the "bid" price) and the lowest price a seller is willing to accept for Shares (the "ask" price) when buying or selling Shares in the secondary market. The difference in the bid and ask prices is referred to as the "bid-ask spread."

Recent information regarding the Fund's NAV, market price, how often Shares traded on the Exchange at a premium or discount, and bid-ask spreads can be found on the Fund's website at www.cloughetfs.com.

Tax Information

The Fund's distributions are generally taxable as ordinary income, qualified dividend income, or capital gains (or a combination), unless your investment is held in an IRA or other tax-advantaged account. Distributions on investments made through tax-deferred arrangements may be taxed later upon withdrawal of assets from those accounts. See "Dividends, Distributions, and Taxes - Dividends and Distributions" for more information.

Financial Intermediary Compensation

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank) (an “Intermediary”), the adviser or its affiliates may pay Intermediaries for certain activities related to the Fund, including participation in activities that are designed to make Intermediaries more knowledgeable about exchange traded products, including the Fund, or for other activities, such as marketing, educational training or other initiatives related to the sale or promotion of Shares. These payments may create a conflict of interest by influencing the Intermediary and your salesperson to recommend the Fund over another investment. Any such arrangements do not result in increased Fund expenses. Ask your salesperson or visit the Intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

Additional Information About Each Fund’s Investment Objective.

Fund	Investment Objective
Clough Hedged Equity ETF	The Clough Hedged Equity ETF (the “Fund”) seeks long-term capital appreciation while minimizing volatility.
Clough Select Equity ETF	The Clough Select Equity ETF (the “Fund”) seeks capital appreciation and lower volatility than the broader market.

Each Fund’s investment objective may be changed by the Board of Trustees (the “Board”) without shareholder approval upon written notice to shareholders.

Additional Information About Each Fund’s Investment Strategies.

Principal Investment Strategies

Each Fund has adopted a policy, as described below, to comply with Rule 35d-1 under the Investment Company Act of 1940 (the “1940 Act”). Each such policy has been adopted as a non-fundamental investment policy and may be changed without shareholder approval upon 60 days’ written notice to shareholders.

Under normal circumstances, each Fund invests at least 80% of its net assets (plus any borrowings for investment purposes) in equity securities, including common stocks and depositary receipts.

The Clough Hedged Equity ETF intends to engage in short sales. To effect a short sale, the Fund arranges through a broker to borrow the security it does not own to be delivered to a buyer of such security. In borrowing the security to be delivered to the buyer, the Fund will become obligated to replace the security borrowed at the time of replacement, regardless of the market price at that time. A short sale results in a gain when the price of the securities sold short declines between the date of the short sale and the date on which a security is purchased to replace the borrowed security. Conversely, a short sale will result in a loss if the price of the security sold short increases. When the Fund makes a short sale, the broker effecting the short sale typically holds the proceeds as part of the collateral securing the Fund’s obligation to cover the short position.

Non-Principal Investment Strategies

The Clough Select Equity ETF may also purchase or sell (write) exchange-traded put or call options on stocks or stock indices for any purpose consistent with its investment objective, such as for hedging or obtaining market exposure. A put option gives the owner of the put the right, but not the obligation, to sell a security at a stated price within a specific timeframe, and a call option gives the owner of the call the right, but not the obligation, to buy a security at a stated price within a specific timeframe.

Additional Information About the Funds' Principal Risks. An investment in a Fund entails risks. A Fund could lose money, or its performance could trail that of other investment alternatives. The following provides additional information about each Fund's principal risks. It is important that investors closely review and understand these risks before making an investment in a Fund. Each risk applies to each Fund unless otherwise specified. Just as in each Fund's summary section, the principal risks below are presented in alphabetical order to facilitate finding particular risks and comparing them with those of other funds. Each risk summarized below is considered a "principal risk" of investing in the applicable Fund, regardless of the order in which it appears.

- **Counterparty Risk** (*Clough Hedged Equity ETF only*). Investing in derivatives involves entering into contracts with third parties (i.e., counterparties). The use of derivatives involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund will be subject to credit risk (i.e., the risk that a counterparty is or is perceived to be unwilling or unable to make timely payments or otherwise meet its contractual obligations) with respect to the amount it expects to receive from counterparties to derivatives entered into by the Fund. If a counterparty becomes bankrupt or fails to perform its obligations, or if any collateral posted by the counterparty for the benefit of the Fund is insufficient or there are delays in the Fund's ability to access such collateral, the value of an investment in such Fund may decline. The Fund also seeks to mitigate risks by generally requiring that the counterparties agree to post collateral for the benefit of the Fund, marked to market daily, in an amount approximately equal to what the counterparty owes the Fund, subject to certain minimum thresholds. To the extent any such collateral is insufficient or there are delays in accessing the collateral, the Fund will be exposed to the risks described above, including possible delays in recovering amounts as a result of bankruptcy proceedings.
- **Cybersecurity Risk.** With the increased use of technologies such as the Internet and the dependence on computer systems to perform business and operational functions, funds (such as a Fund) and their service providers may be prone to operational and information security risks resulting from cyber-attacks and/or technological malfunctions. In general, cyber-attacks are deliberate, but unintentional events may have similar effects. Cyber-attacks include, among others, stealing or corrupting data maintained online or digitally, preventing legitimate users from accessing information or services on a website, releasing confidential information without authorization, and causing operational disruption. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets or proprietary information, or cause a Fund, the Adviser, and/or other service providers (including custodians and financial intermediaries) to suffer data breaches or data corruption. Additionally, cybersecurity failures or breaches of the electronic systems of a Fund, the Adviser, or the Fund's other service providers, market makers, APs, a Fund's primary listing exchange, or the issuers of securities in which a Fund invests have the ability to disrupt and negatively affect the Fund's business operations, including the ability to purchase and sell Shares, potentially resulting in financial losses to the Fund and its shareholders. For instance, cyber-attacks or technical malfunctions may interfere with the processing of shareholder or other transactions, affect a Fund's ability to calculate its NAV, cause the release of private shareholder information or confidential Fund information, impede trading, cause reputational damage, and subject the Fund to regulatory fines, penalties or financial losses, reimbursement or other compensation costs, and additional compliance costs. Cyber-attacks or technical malfunctions may render records of Fund assets and transactions, shareholder ownership of Shares, and other data integral to the functioning of a Fund inaccessible or inaccurate or incomplete. A Fund also may incur substantial costs for cybersecurity risk management to prevent cyber incidents in the future. A Fund and its respective shareholders could be negatively impacted as a result.

- **Depository Receipts Risk.** The Funds may hold the securities of non-U.S. companies in the form of depository receipts, including ADRs, EDRs and GDRs. ADRs are negotiable certificates issued by a U.S. financial institution that represent a specified number of shares in a foreign stock and trade on a U.S. national securities exchange, such as the NYSE. ADRs are U.S. dollar denominated. EDRs and GDRs are similar to ADRs, but are shares of foreign-based corporations generally issued by international banks in one or more markets around the world. EDRs and GDRs are typically U.S. dollar denominated but may be denominated in a foreign currency. As a result, changes in foreign currency exchange rates may affect the value of a Fund's portfolio. Depository receipts in which the Fund invests are "sponsored" and may be unregistered and unlisted. Sponsored depository receipts are established jointly by a depository and the underlying issuer, whereas unsponsored depository receipts may be established by a depository without participation by the underlying issuer. In addition, because the underlying securities of depository receipts trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the depository receipts may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares.

- **Derivatives Risk** (*Clough Hedged Equity ETF only*). Derivatives are financial instruments that have a value which depends upon, or is derived from, a reference asset, such as one or more underlying securities, pools of securities, indices, rates or currencies. Derivatives may result in investment exposures that are greater than their cost would suggest; in other words, a small investment in a derivative may have a large impact on Fund performance. The successful use of derivatives generally depends on the ability to predict market movements. The use of these instruments requires special skills and knowledge of investment techniques that are different than those normally required for purchasing and selling securities. If the Adviser uses a derivative instrument at the wrong time or judges market conditions incorrectly, or if the derivative instrument does not perform as expected, these strategies may significantly reduce the Fund's return. The Fund could also experience losses if it is unable to close out a position because the market for an instrument or position is or becomes illiquid. Derivatives, including options, are subject to a number of risks, some of which are described elsewhere in this Prospectus. The use of derivatives may entail risks greater than, or possibly different from, such risks to which the Fund is exposed. Certain of the different risks to which the Fund might be exposed due to the use of derivatives include the following:
 - *Correlation Risk* is the risk that derivative instruments may be mispriced or improperly valued and that changes in the value of the derivatives may not correlate perfectly with the underlying asset or security.

 - *Hedging Risk* is the risk that derivative instruments used to hedge against an opposite position may offset losses, but they also may offset gains.

 - *Segregation Risk* is the risk associated with any requirement which may be imposed to segregate assets or enter into offsetting positions in connection with investments in derivatives. Such segregation will not limit exposure to loss, and the Fund may be exposed to investment risk with respect to the segregated assets to the extent that, but for the applicable segregation requirement, the segregated assets would be sold.

- *Volatility Risk* is the risk that, because some derivatives involve economic leverage, this economic leverage will increase the volatility of the derivative instruments, as they may increase or decrease in value more quickly than the underlying currency, security, interest rate or other economic variable.
- **Emerging Markets Risk.** Emerging markets are subject to greater market volatility, lower trading volume, political and economic instability, uncertainty regarding the existence of trading markets and more governmental limitations on foreign investment than more developed markets. In addition, securities in emerging markets may be subject to greater price fluctuations than securities in more developed markets. Differences in regulatory, accounting, auditing, and financial reporting and recordkeeping standards could impede the Adviser’s ability to evaluate local companies and impact a Fund’s performance. There also may be limitations on the rights and remedies available to investors in emerging market companies compared to those associated with U.S. companies. In addition, brokerage and other transaction costs on foreign securities exchanges are often higher than in the U.S. and there is generally less government supervision and regulation of exchanges, brokers and issuers in foreign countries. Foreign markets ADRs and ETFs involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of ADRs and ETFs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs and ETFs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares.
- **Equity Market Risk.** Common stocks are susceptible to general stock market fluctuations and to volatile increases and decreases in value as market confidence in and perceptions of their issuers change. These investor perceptions are based on various and unpredictable factors including: expectations regarding government, economic, monetary and fiscal policies; inflation and interest rates; economic expansion or contraction; pandemics; and global or regional political, economic and banking crises. If you held common stock, or common stock equivalents, of any given issuer, you would generally be exposed to greater risk than if you held preferred stocks and debt obligations of the issuer because common stockholders, or holders of equivalent interests, generally have inferior rights to receive payments from issuers in comparison with the rights of preferred stockholders, bondholders, and other creditors of such issuers.
- **ETF Risks.** Each Fund is an ETF and, as a result of its structure, is exposed to the following risks:
 - *Authorized Participants, Market Makers, and Liquidity Providers Concentration Risk.* A Fund has a limited number of financial institutions that may act as APs. In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. Shares may trade at a material discount to NAV and possibly face delisting if either: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
 - *Costs of Buying or Selling Shares Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers, as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors also will incur the cost of the difference between the price at which an investor is willing to buy Shares (the “bid” price) and the price at which an investor is willing to sell Shares (the “ask” price). This difference in bid and ask prices is often referred to as the “spread” or “bid/ask spread.” The bid/ask spread varies over time for Shares based on trading volume and market liquidity and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, a relatively small investor base in a Fund, asset swings in a Fund and/or increased market volatility may cause increased bid/ask spreads. Due to the costs of buying or selling Shares, including bid/ask spreads, frequent trading of Shares may significantly reduce investment results and an investment in Shares may not be advisable for investors who anticipate regularly making small investments.

- *Shares May Trade at Prices Other Than NAV Risk.* As with all ETFs, Shares may be bought and sold in the secondary market at market prices. Although it is expected that the market price of Shares will approximate a Fund's NAV, there may be times when the market price of Shares is more than the NAV intra-day (premium) or less than the NAV intra-day (discount) due to supply and demand of Shares or during periods of market volatility. This risk is heightened in times of market volatility or periods of steep market declines and periods when there is limited trading activity for Shares in the secondary market, in which case such premiums or discounts may be significant. The market price of Shares during the trading day, like the price of any exchange-traded security, includes a "bid/ask" spread charged by the exchange specialist, market makers or other participants that trade Shares. In times of severe market disruption, the bid/ask spread can increase significantly. At those times, Shares are most likely to be traded at a discount to NAV, and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. The Adviser believes that, under normal market conditions, large market price discounts or premiums to NAV will not be sustained because of arbitrage opportunities.
- *Trading Risk.* Although Shares are listed for trading on the Exchange and may be listed or traded on U.S. and non-U.S. stock exchanges other than the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to Exchange "circuit breaker" rules, which temporarily halt trading on the Exchange when a decline in the S&P 500® Index during a single day reaches certain thresholds (e.g., 7%, 13%, and 20%). Additional rules applicable to the Exchange may halt trading in Shares when extraordinary volatility causes sudden, significant swings in the market price of Shares. There can be no assurance that Shares will trade with any volume, or at all, on any stock exchange. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of a Fund's underlying portfolio holdings, which can be significantly less liquid than Shares.
- **Foreign Markets Risk.** Investments in ADRs and ETFs that provide exposure to non-U.S. companies involve certain risks that may not be present with investments in U.S. companies. For example, investments in non-U.S. companies may be subject to risk of loss due to foreign currency fluctuations or to political or economic instability. There may be less information publicly available about a non-U.S. issuer than a U.S. issuer. Securities of non-U.S. companies may be subject to different accounting, auditing, financial reporting and investor protection standards than those of U.S. companies. Investments tied to non-U.S. companies may be subject to withholding or other taxes and may be subject to additional trading, settlement, custodial, and operational risks. Because legal systems differ, there also is the possibility that it will be difficult to obtain or enforce legal judgments in certain countries. Since foreign exchanges may be open on days when a Fund does not price its Shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell Shares. Conversely, Shares may trade on days when foreign exchanges are closed. Each of these factors can make investments in a Fund more volatile and potentially less liquid than other types of investments. Foreign markets ADRs and ETFs involve risks similar to those associated with investments in foreign securities, such as changes in political or economic conditions of other countries, changes in the exchange rates of foreign currencies, and, because the underlying securities of ADRs and ETFs trade on foreign exchanges at times when the U.S. markets are not open for trading, the value of the securities underlying the ADRs and ETFs may change materially at times when the U.S. markets are not open for trading, regardless of whether there is an active U.S. market for shares. This, in turn, could lead to differences in the market price of the ETF's and ADR shares and the underlying value of those shares.

- **Growth Investing Risk.** Growth stocks can be volatile for several reasons. Since those companies usually invest a high portion of earnings in their businesses, they may lack the dividends of value stocks that can cushion stock prices in a falling market. The prices of growth stocks are based largely on projections of the issuer's future earnings and revenues. If a company's earnings or revenues fall short of expectations, its stock price may fall dramatically.
- **Hedging Risk** (*Clough Hedged Equity ETF only*). Options used by the Fund to reduce volatility may not perform as intended. There can be no assurance that the Fund's option strategy will be effective. It may expose the Fund to losses, e.g., option premiums, to which it would not have otherwise been exposed if it only invested in stocks. Further, the option strategy may not fully protect the Fund against declines in the value of its portfolio securities.
- **Investment Themes Risk.** Each Fund's investment program depends on the Adviser's identification and development of global or regional investment themes, and a Fund's performance may suffer if such themes, which can be inherently challenging to identify, are not well identified, or do not unfold as anticipated. Failure to correctly identify or develop the themes that will guide a Fund's portfolio investments, or the failure of a theme to unfold in the way the Adviser anticipates, may result from many causes, including the following: governments or others may decide to oppose or delay certain economic, social or political developments that are the basis of investment themes; demographic or economic data necessary to understand correctly the way in which certain themes may unfold in some countries may be incorrect or incomplete; development of themes and their longevity may require attention to subtle cultural factors not always apparent to outside observers; or social and political changes or natural disasters in some parts of the world may alter the underlying conditions or affect the availability of natural resources necessary to an emerging theme.
- **Liquidity Risk.** In certain situations, it may be difficult or impossible to sell an investment in an orderly fashion at an acceptable price.
- **Long/Short Risk** (*Clough Hedged Equity ETF only*). The Fund seeks long exposure to certain securities and short exposure to certain other securities. There is no guarantee that the returns on the Fund's long or short positions will produce positive returns, and the Fund could lose money if either or both the Fund's long and short positions produce negative returns.

- **Management Risk.** The Adviser continuously evaluates each Fund's holdings, purchases and sales with a view to achieving each Fund's investment objective. However, achievement of the stated investment objective cannot be guaranteed. The Adviser's judgment about the markets, the economy, or companies may not anticipate actual market movements, economic conditions or company performance, and these factors may affect the return on your investment. In fact, no matter how good a job the Adviser does, you could lose money on your investment in a Fund, just as you could with other investments. If the Adviser is incorrect in its assessment of the income, growth or price realization potential of a Fund's holdings or incorrect in its assessment of general market or economic conditions, then the value of each Fund's shares may decline.
- **Market Capitalization Risk.**
 - *Large-Capitalization Investing Risk.* The securities of large-capitalization companies may be relatively mature compared to smaller companies and, therefore, subject to slower growth during times of economic expansion. Large-capitalization companies also may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes.
 - *Mid-Capitalization Investing Risk.* The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large-capitalization companies. The securities of midcapitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large-capitalization stocks or the stock market as a whole. Some mid-capitalization companies have limited product lines, markets, financial resources, and management personnel and tend to concentrate on fewer geographical markets relative to large-capitalization companies.
 - *Small-Capitalization Investing Risk.* The securities of small-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of large- or mid-capitalization companies. The securities of small-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than large- or mid-capitalization stocks or the stock market as a whole. There is typically less publicly available information concerning smaller-capitalization companies than for larger, more established companies.
- **Market Risk.** Market risks, including political, regulatory, market, and economic or other developments, and developments that impact specific economic sectors, industries or segments of the market, can affect the value of a Fund's shares. Local, regional, or global events such as war, acts of terrorism, natural disasters, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the market generally and on specific securities. Each Fund is subject to the risk that the prices of, and the income generated by, securities held by the Fund may decline significantly and/or rapidly in response to adverse issuer, political, regulatory, general economic and market conditions, or other developments, such as regional or global economic instability (including terrorism and related geopolitical risks), interest rate fluctuations, and those events directly involving the issuers that may cause broad changes in market value, public perceptions concerning these developments, and adverse investor sentiment. Such events may cause the value of securities owned by a Fund to go up or down, sometimes rapidly or unpredictably. Changes in the economic climate, investor perceptions and stock market volatility also can cause the prices of a Fund's investments to decline regardless of the conditions of the issuers held by the Fund. There is also a risk that policy changes by the U.S. Government and/or Federal Reserve, such as increasing interest rates, could cause increased volatility in financial markets and higher levels of Fund redemptions, which could have a negative impact on a Fund. These events may lead to periods of volatility and increased redemptions, which could cause a Fund to experience a loss when selling securities to meet redemption requests by shareholders. The risk of loss increases if the redemption requests are unusually large or frequent.

Prices may fluctuate widely over short or extended periods in response to company, market or economic news. Markets also tend to move in cycles, with periods of rising and falling prices. If there is a general decline in the securities and other markets, your investment in a Fund may lose value, regardless of the individual results of the securities and other instruments in which the Fund invests.

In the past several years, financial markets, such as those in the United States, Europe, Asia and elsewhere, have experienced increased volatility, depressed valuations, decreased liquidity and heightened uncertainty. Governmental and non-governmental issuers have defaulted on, or been forced to restructure, their debts. These conditions may continue, recur, worsen or spread.

The U.S. Government and the Federal Reserve, as well as certain foreign governments and central banks, took steps to support financial markets, including by keeping interest rates at historically low levels for an extended period. The Federal Reserve has concluded its market support activities and has raised, and may continue to raise, interest rates. Such actions, including additional interest rate hikes, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which a Fund invests.

Policy and legislative changes in the United States and in other countries are affecting many aspects of financial regulation, and may in some instances contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

Economies and financial markets throughout the world are becoming increasingly interconnected. As a result, whether or not a Fund invests in securities of issuers located in or with significant exposure to countries experiencing economic and financial difficulties, the value and liquidity of the Fund's investments may be negatively affected.

- **Options Risk** (*Clough Hedged Equity ETF only*). Options are subject to correlation risk because there may be an imperfect correlation between the prices of options and movements in the price of the underlying securities. Options may expire unexercised, causing the Fund to lose the premium paid for them. The success of the Fund's investment in options depends upon many factors, such as the price of the options which is a function of various factors that may change rapidly over time. If a counterparty defaults, the Fund's only recourse will be to pursue contractual remedies against the counterparty, and the Fund may be unsuccessful in its pursuit. The Fund thus assumes the risk that it may be delayed in or prevented from obtaining payments owed to it pursuant to an over-the-counter options transaction.

Exchange traded index options give the holder of the option the right to buy (or to sell) a position in an index of securities to the writer of the option, at a certain price. Selling index call options reduces the Fund's ability to profit from increases in the value of the Fund's equity portfolio, and purchasing put options may result in the Fund's loss of premiums paid in the event that the put options expire unexercised. To the extent that the Fund reduces its put option holdings relative to the number of call options sold by the Fund, the Fund's ability to mitigate losses in the event of a market decline will be reduced.

When the Fund sells an option, it gains the amount of the premium it receives, but also incurs a liability representing the value of the option it has sold until the option is either exercised and finishes “in the money,” meaning it has value and can be sold, or the option expires worthless, or the expiration of the option is “rolled,” or extended forward. The value of the options in which the Fund invests is based partly on the volatility used by market participants to price such options (i.e., implied volatility). Accordingly, increases in the implied volatility of such options will cause the value of such options to increase (even if the prices of the options’ underlying stocks do not change), which will result in a corresponding increase in the liabilities of the Fund under such options and thus decrease the Fund’s NAV.

- **Portfolio Turnover Risk.** Each Fund’s strategy may frequently involve buying and selling securities, which may lead to relatively high portfolio turnover. Higher portfolio turnover may result in a Fund paying increased transaction costs and generating greater tax liabilities for shareholders. Higher portfolio turnover also may cause a Fund’s performance to be less than you expect.
- **Sector Risk.** Each Fund’s investing approach may result in an emphasis on certain sectors, industries, or sub-industries of the market at any given time. To the extent a Fund invests more heavily in one sector or sub-industry of the market, it thereby presents a more concentrated risk and its performance will be especially sensitive to developments that significantly affect those sectors, industries, or sub-industries. In addition, the value of a Fund’s shares may change at different rates compared to the value of shares of a fund with investments in a more diversified mix of sectors and industries. An individual sector, industry, or subindustry of the market may have above-average performance during particular periods but may also move up and down more than the broader market. The several industries that constitute a sector may all react in the same way to economic, political or regulatory events. A Fund’s performance could also be affected if the sectors, industries, or sub-industries do not perform as expected. Alternatively, the lack of exposure to one or more sectors, industries, or sub-industries may adversely affect performance. If such sectors underperform relative to the broader equity market, or if the sectors to which a Fund has less exposure relative to the broader equity market outperform relative to the broader equity market, the Fund’s performance may lag that of the broader equity market. Each Fund may have significant exposure to the following sectors:
 - *Consumer Sectors Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, tariffs and trade barriers, changes in demographics, and consumer preferences. Companies in consumer-oriented sectors depend heavily on disposable household income and consumer spending and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability.
 - *Energy Sector Risk.* The energy sector includes companies operating in the exploration and production, refining and marketing, and storage and transportation of oil and gas and coal and consumable fuels. It also includes companies that offer oil and gas equipment and related services. The Fund is subject to the risk that the securities of such issuers will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions and/or increased competition affecting the energy sector. The performance of companies operating in the energy sector is closely tied to the price and supply of energy fuels and international political events.

- o *Health Care Sector Risk.* Companies in the Health Care Sector are subject to extensive government regulation and their profitability can be significantly affected by restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure (including price discounting), limited product lines and an increased emphasis on the delivery of healthcare through outpatient services. Companies in the Health Care Sector are heavily dependent on obtaining and defending patents, which may be time consuming and costly, and the expiration of patents may also adversely affect the profitability of these companies. Health care companies are also subject to extensive litigation based on product liability and similar claims. In addition, their products can become obsolete due to industry innovation, changes in technologies or other market developments. Many new products in the Health Care Sector require significant research and development and may be subject to regulatory approvals, all of which may be time consuming and costly with no guarantee that any product will come to market.
- o *Industrials Sector Risk.* Issuers in the Industrials Sector are affected by supply and demand, both for their specific product or service and for Industrials Sector products in general. The products of such issuers may face obsolescence due to rapid technological developments and frequent new product introduction. Government regulations, world events, economic conditions and exchange rates affect the performance of companies in the Industrials Sector. Issuers in the Industrials Sector may be adversely affected by liability for environmental damage, product liability claims and exchange rates. The Industrials Sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors.
- o *Information Technology Sector Risk.* Market or economic factors impacting information technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Funds' investments. The value of stocks of information technology companies and companies that rely heavily on technology is particularly vulnerable to rapid changes in technology product cycles, rapid product obsolescence, government regulation and competition, both domestically and internationally, including competition from foreign competitors with lower production costs. Stocks of information technology companies and companies that rely heavily on technology, especially those of smaller, less-seasoned companies, tend to be more volatile than the overall market. Information technology companies are heavily dependent on patent and intellectual property rights, the loss or impairment of which may adversely affect profitability. Additionally, companies in the technology sector may face dramatic and often unpredictable changes in growth rates and competition for the services of qualified personnel.
- **Security Selection Risk.** The securities in each Fund's portfolio may decline in value. The Adviser's analysis and portfolio management practices may not achieve the desired results.
- **Short Selling Risk** (*Clough Hedged Equity ETF only*). Short selling involves the sale of securities borrowed from a third party. The short seller profits if the borrowed security's price declines. If a shorted security increases in value, a higher price must be paid to buy the stock back to cover the short sale, resulting in a loss. The Fund may incur expenses related to short selling, including compensation, interest or dividends, and transaction costs payable to the security lender, whether the price of the shorted security increases or decreases. The amount the Fund could lose on a short sale is theoretically unlimited. Short selling also involves counterparty risk – the risk associated with the third party ceasing operations or failing to sell the security back.

- **Tax Risk** (*Clough Hedged Equity ETF only*). The writing of call options by the Fund may significantly reduce or eliminate its ability to make distributions eligible to be treated as qualified dividend income. Covered call options may also be subject to the federal tax rules applicable to straddles under the Code. If positions held by the Fund were treated as “straddles” for federal income tax purposes, or the Fund’s risk of loss with respect to a position was otherwise diminished as set forth in Treasury regulations, dividends on stocks that are a part of such positions would not constitute qualified dividend income subject to such favorable income tax treatment in the hands of non-corporate shareholders or eligible for the dividends received deduction for corporate shareholders. In addition, generally, straddles are subject to certain rules that may affect the amount, character and timing of the Fund’s recognition of gains and losses with respect to straddle positions by requiring, among other things, that: (1) any loss realized on disposition of one position of a straddle may not be recognized to the extent that the Fund has unrealized gains with respect to the other position in such straddle; (2) the Fund’s holding period in straddle positions be suspended while the straddle exists (possibly resulting in a gain being treated as short-term capital gain rather than long-term capital gain); (3) the losses recognized with respect to certain straddle positions that are part of a mixed straddle and that are not subject to Section 1256 of the Internal Revenue Code be treated as 60% long-term and 40% short-term capital loss; (4) losses recognized with respect to certain straddle positions that would otherwise constitute short-term capital losses be treated as long-term capital losses; and (5) the deduction of interest and carrying charges attributable to certain straddle positions may be deferred.
- **Value Investing Risk.** Because the Fund may utilize a value style of investing, the Fund could suffer losses or produce poor results relative to other funds, even in a rising market, if the Adviser’s assessment of a company’s value or prospects for exceeding earnings expectations or market conditions is incorrect.

PORTFOLIO HOLDINGS INFORMATION

Information about each Fund’s daily portfolio holdings is available at www.cloughetfs.com. A complete description of the Funds’ policies and procedures with respect to the disclosure of the Funds’ portfolio holdings is available in the Funds’ Statement of Additional Information (the “SAI”).

MANAGEMENT

Investment Adviser

Clough Capital Partners L.P., a Delaware limited partnership located at 53 State Street, Floor 27, Boston, MA 02109, serves as the investment adviser for each Fund. The Adviser, subject to the oversight of the Board, provides an investment management program for each Fund and manages the day-to-day operations of the Funds. The Adviser also arranges for transfer agency, custody, fund administration, distribution, and all other services necessary for each Fund to operate. The Adviser is an SEC-registered investment adviser. Previously, from each Fund’s inception to August 28, 2023, the Funds were advised by Changebridge Capital, LLC.

For the services it provides to the Funds, the Adviser is entitled to a unified management fee, which is calculated daily and paid monthly, at an annual rate based on each Fund’s average daily net assets as set forth in the table below.

Fund	Management Fee
Clough Hedged Equity ETF	1.35%*
Clough Select Equity ETF	0.85%

* The management fee for the Predecessor Fund decreased from 1.70% to 1.35% effective February 29, 2024.

Pursuant to an investment advisory agreement between the Trust, on behalf of each Fund, and the Adviser (the “Advisory Agreement”), the Adviser has agreed to pay all expenses of each Fund except the fee payable to the Adviser under the Advisory Agreement, interest charges on any borrowings, dividends, and other expenses on securities sold short, taxes, brokerage commissions and other expenses incurred in placing orders for the purchase and sale of securities and other investment instruments, acquired fund fees and expenses, accrued deferred tax liability, extraordinary expenses, and distribution fees and expenses paid by the Trust, if any, under the distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act.

Portfolio Manager

Vincent Lorusso is primarily responsible for the day-to-day management of each Fund’s portfolio.

Mr. Lorusso has been a portfolio manager of each Fund since its inception. He has more than 26 years of industry experience. Prior to re-joining the Adviser in 2023 as President and Chief Executive Officer, Partner, and Portfolio Manager, Mr. Lorusso was a Founder and Portfolio Manager of Changebridge Capital, LLC since 2020. Previously, he served as Partner and Portfolio Manager at the Adviser, where he worked for 16 years. Prior to that, Mr. Lorusso was a Senior Investment Consultant with Natixis Asset Management. With a global perspective, he has analyzed and invested in a broad range of equity securities over the course of his career. Mr. Lorusso holds an MS in Finance and a BS in Finance & English, both from Boston College.

The SAI provides additional information about the portfolio manager’s compensation structure, other accounts managed by the portfolio manager and the portfolio manager’s ownership of Shares of the Funds.

HOW TO BUY AND SELL SHARES

Each Fund issues and redeems Shares only in Creation Units at the NAV per share next determined after receipt of an order from an AP. Only APs may acquire Shares directly from a Fund, and only APs may tender their Shares for redemption directly to a Fund, at NAV. APs must be a member or participant of a clearing agency registered with the SEC and must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Funds’ transfer agent, with respect to purchases and redemptions of Creation Units. Once created, Shares trade in the secondary market in quantities less than a Creation Unit.

Most investors buy and sell Shares in secondary market transactions through brokers. Individual Shares are listed for trading on the secondary market on the Exchange and can be bought and sold throughout the trading day like other publicly traded securities.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offer price in the secondary market on each leg of a round trip (purchase and sale) transaction. In addition, because secondary market transactions occur at market prices, you may pay more than NAV when you buy Shares and receive less than NAV when you sell those Shares.

Book Entry

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. DTC’s participants include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” through your brokerage account.

Frequent Purchases and Redemptions of Shares

The Funds impose no restrictions on the frequency of purchases and redemptions of Shares. In determining not to approve a written, established policy, the Board evaluated the risks of market timing activities by Fund shareholders. Purchases and redemptions by APs, who are the only parties that may purchase or redeem Shares directly from the Funds, are an essential part of the ETF process and help keep Share trading prices in line with NAV. As such, the Funds accommodate frequent purchases and redemptions by APs. However, frequent purchases and redemptions for cash may increase tracking error and portfolio transaction costs and lead to the realization of capital gains. The Funds’ fair valuation of their holdings consistent with the 1940 Act and Rule 2a-5 thereunder and their ability to impose transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs incurred by the Funds in effecting trades help to minimize the potential adverse consequences of frequent purchases and redemptions.

Determination of NAV

Each Fund’s NAV is calculated as of the scheduled close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m. Eastern time, each day the NYSE is open for business. Each NAV for a Fund is calculated by dividing the applicable Fund’s net assets by its Shares outstanding.

In calculating its NAV, a Fund generally values its assets on the basis of market quotations, last sale prices, or estimates of value furnished by a pricing service or brokers who make markets in such instruments. If the foregoing information is not available for a security held by a Fund or is determined to be unreliable, the security will be valued at fair value estimates under guidelines established by the Board (as described below).

Fair Value Pricing

The Adviser has been designated by the Board as the valuation designee for the Funds pursuant to Rule 2a-5 under the 1940 Act. In its capacity as valuation designee, the Adviser has adopted procedures and methodologies to fair value Fund investments whose market prices are not “readily available” or are deemed to be unreliable. For example, such circumstances may arise when: (i) an investment has been de-listed or has had its trading halted or suspended; (ii) an investment’s primary pricing source is unable or unwilling to provide a price; (iii) an investment’s primary trading market is closed during regular market hours; or (iv) an investment’s value is materially affected by events occurring after the close of the investment’s primary trading market. Generally, when fair valuing an investment held by a Fund, the Adviser will take into account all reasonably available information that may be relevant to a particular valuation including, but not limited to, fundamental analytical data regarding the issuer, information relating to the issuer’s business, recent trades or offers of the investment, general and/or specific market conditions and the specific facts giving rise to the need to fair value the investment. Fair value determinations are made in good faith and in accordance with the fair value methodologies established by the Adviser. Due to the subjective and variable nature of determining the fair value of a security or other investment, there can be no assurance that the Adviser’s determined fair value will match or closely correlate to any market quotation that subsequently becomes available or the price quoted or published by other sources. In addition, a Fund may not be able to obtain the fair value assigned to an investment if the Fund were to sell such investment at or near the time its fair value is determined.

Investments by Registered Investment Companies

Section 12(d)(1) of the 1940 Act and the rules thereunder limit investments by registered investment companies in the securities of other investment companies. Registered investment companies are permitted to invest in a Fund beyond the limits set forth in section 12(d)(1), subject to certain terms and conditions, including that such investment companies enter into an agreement with such Fund.

Delivery of Shareholder Documents – Householding

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of prospectuses and other shareholder documents, please contact your broker-dealer. If you are currently enrolled in householding and wish to change your householding status, please contact your broker-dealer.

DIVIDENDS, DISTRIBUTIONS AND TAXES

Dividends and Distributions

Each Fund intends to pay out dividends in cash, if any, and distribute any net realized capital gains to its shareholders at least annually. Each Fund will declare and pay capital gain distributions in cash, if any. Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available. Your broker is responsible for distributing the income and capital gain distributions to you.

Taxes

The following discussion is a summary of certain important U.S. federal income tax considerations generally applicable to investments in the Funds. Your investment in a Fund may have other tax implications. Please consult your tax advisor about the tax consequences of an investment in Shares, including the possible application of foreign, state, and local tax laws. This summary does not apply to Shares held in an IRA or other tax-qualified plans, which are generally not subject to current tax. Transactions relating to Shares held in such accounts may, however, be taxable at some time in the future. This summary is based on current tax laws, which may change.

Each Fund intends to qualify each year for treatment as a regulated investment company (a “RIC”) under Subchapter M of the Code. If it meets certain minimum distribution requirements, a RIC is not subject to tax at the fund level on income and gains from investments that are timely distributed to shareholders. However, a Fund’s failure to qualify as a RIC or to meet minimum distribution requirements would result (if certain relief provisions were not available) in fund-level taxation and, consequently, a reduction in income available for distribution to shareholders.

Unless your investment in Shares is made through a tax-exempt entity or tax-advantaged account, such as an IRA, you need to be aware of the possible tax consequences when a Fund makes distributions, when you sell your Shares listed on the Exchange, and when you purchase or redeem Creation Units (APs only).

Taxes on Distributions

Each Fund intends to distribute, at least annually, substantially all of its net investment income and net capital gains. The distributions you receive may be subject to federal, state, and local taxation, depending on your tax situation. For federal income tax purposes, distributions of investment income are generally taxable as ordinary income or qualified dividend income. Taxes on distributions of capital gains (if any) are determined by how long a Fund owned the investments that generated them, rather than how long a shareholder has owned his or her Shares. Sales of assets held by a Fund for more than one year generally result in long-term capital gains and losses, and sales of assets held by a Fund for one year or less generally result in short-term capital gains and losses. Distributions of a Fund’s net capital gain (the excess of net long-term capital gains over net short-term capital losses) that are reported by such Fund as capital gain dividends (“Capital Gain Dividends”) will be taxable as long-term capital gains, which for non-corporate shareholders are subject to tax at reduced rates of up to 20% (lower rates apply to individuals in lower tax brackets). Distributions of short-term capital gain will generally be taxable as ordinary income. Dividends and distributions are generally taxable to you whether you receive them in cash or reinvest them in additional Shares.

Distributions reported by a Fund as “qualified dividend income” are generally taxed to non-corporate shareholders at rates applicable to long-term capital gains. For such dividends to be taxed as qualified dividend income to a non-corporate shareholder, a Fund must satisfy certain holding period requirements with respect to the underlying stock and the non-corporate shareholder must satisfy holding period requirements with respect to his or her ownership of such Fund’s Shares. Holding periods may be suspended for these purposes for stock that is hedged. “Qualified dividend income” generally is income derived from dividends paid by U.S. corporations or certain foreign corporations that are either incorporated in a U.S. possession or eligible for tax benefits under certain U.S. income tax treaties. In addition, dividends that a Fund receives in respect of stock of certain foreign corporations may be qualified dividend income if that stock is readily tradable on an established U.S. securities market. Corporate shareholders may be entitled to a dividends received deduction for the portion of dividends they receive from a Fund that are attributable to dividends received by such Fund from U.S. corporations, subject to certain limitations. Certain of the Funds’ investment strategies may limit their ability to distribute dividends eligible to be treated as qualified dividend income or for the dividends received deduction applicable to corporate shareholders.

Shortly after the close of each calendar year, you will be informed of the amount and character of any distributions received from a Fund.

In general, your distributions are subject to federal income tax for the year in which they are paid. Certain distributions paid in January, however, may be treated as paid on December 31 of the prior year. Distributions are generally taxable even if they are paid from income or gains earned by a Fund before your investment (and thus were included in the Shares' NAV when you purchased your Shares).

You may wish to avoid investing in a Fund shortly before a dividend or other distribution, because such a distribution will generally be taxable even though it may economically represent a return of a portion of your investment.

If you are neither a resident nor a citizen of the United States or if you are a foreign entity, distributions (other than Capital Gain Dividends) paid to you by a Fund will generally be subject to a U.S. withholding tax at the rate of 30%, unless a lower treaty rate applies. Gains from the sale or other disposition of your Shares from non-U.S. shareholders generally are not subject to U.S. taxation, unless you are a nonresident alien individual who is physically present in the U.S. for 183 days or more per year. A Fund may, under certain circumstances, report all or a portion of a dividend as an "interest-related dividend" or a "short-term capital gain dividend," which would generally be exempt from this 30% U.S. withholding tax, provided certain other requirements are met. Different tax consequences may result if you are a foreign shareholder engaged in a trade or business within the United States or if a tax treaty applies.

A Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) generally is required to withhold and remit to the U.S. Treasury a percentage (currently 24%) of the taxable distributions and sale proceeds paid to any shareholder who fails to properly furnish a correct taxpayer identification number, who has underreported dividend or interest income, or who fails to certify that the shareholder is not subject to such withholding.

Taxes When Fund Shares are Sold on the Exchange

Provided that a shareholder holds Shares as capital assets, any capital gain or loss realized upon a sale or exchange of Shares generally is treated as a long-term capital gain or loss if Shares have been held for more than one year and as a short-term capital gain or loss if Shares have been held for one year or less. However, any capital loss on a sale of Shares held for six months or less is treated as long-term capital loss to the extent of Capital Gain Dividends paid with respect to such Shares. Any loss realized on a sale will be disallowed to the extent Shares are acquired, including through reinvestment of dividends, within a 61-day period beginning 30 days before and ending 30 days after the disposition of Shares. The ability to deduct capital losses may be limited.

The cost basis of Shares acquired by purchase will generally be based on the amount paid for the Shares and then may be subsequently adjusted for other applicable transactions as required by the Code. The difference between the selling price and the cost basis of Shares generally determines the amount of the capital gain or loss realized on the sale or exchange of Shares. Contact the broker through whom you purchased your Shares to obtain information with respect to the available cost basis reporting methods and elections for your account.

Taxes on Purchases and Redemptions of Creation Units

An AP having the U.S. dollar as its functional currency for U.S. federal income tax purposes who exchanges securities for Creation Units generally recognizes a gain or a loss. The gain or loss will be equal to the difference between the value of the Creation Units at the time of the exchange and the exchanging AP's aggregate basis in the securities delivered plus the amount of any cash paid for the Creation Units. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanging AP's basis in the Creation Units and the aggregate U.S. dollar market value of the securities received, plus any cash received for such Creation Units. The Internal Revenue Service ("IRS") may assert, however, that a loss that is realized upon an exchange of securities for Creation Units may not be currently deducted under the rules governing "wash sales" (for an AP who does not mark-to-market their holdings) or on the basis that there has been no significant change in economic position. APs exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

A Fund may include a payment of cash in addition to, or in place of, the delivery of a basket of securities upon the redemption of Creation Units. A Fund may sell portfolio securities to obtain the cash needed to distribute redemption proceeds. This may cause a Fund to recognize investment income and/or capital gains or losses that it might not have recognized if it had completely satisfied the redemption in-kind. As a result, a Fund may be less tax efficient if it includes such a cash payment in the proceeds paid upon the redemption of Creation Units.

Net Investment Income Tax

U.S. individuals with income exceeding specified thresholds are subject to a 3.8% tax on all or a portion of their “net investment income,” which includes interest, dividends, and certain capital gains (generally including capital gains distributions and capital gains realized on the sale of Shares). This 3.8% tax also applies to all or a portion of the undistributed net investment income of certain shareholders that are estates and trusts.

Taxation of Fund Investments

If positions held by a Fund were treated as “straddles” for federal income tax purposes, or a Fund’s risk of loss with respect to a position was otherwise diminished as set forth in Treasury Regulations, dividends on stocks that are a part of such positions would not constitute qualified dividend income subject to such favorable income tax treatment and would not be eligible for the dividends-received deduction for corporate shareholders. In addition, straddles are generally subject to certain rules that may affect the amount, character and timing of a Fund’s gains and losses with respect to straddle positions by requiring, among other things, that: (1) any loss realized on disposition of one position of a straddle may not be recognized to the extent that such Fund has unrealized gains with respect to the other position in such straddle; (2) such Fund’s holding period in straddle positions be suspended while the straddle exists (possibly resulting in a gain being treated as short-term capital gain rather than long-term capital gain); (3) the losses recognized with respect to certain straddle positions that are part of a mixed straddle and that are not subject to Code Section 1256 be treated as 60% long-term and 40% short-term capital loss; (4) losses recognized with respect to certain straddle positions that would otherwise constitute short-term capital losses be treated as long-term capital losses; and (5) the deduction of interest and carrying charges attributable to certain straddle positions may be deferred.

Foreign Investments by a Fund

The Funds invest in foreign securities. Interest and other income received by a Fund with respect to foreign securities may give rise to withholding and other taxes imposed by foreign countries. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If as of the close of a taxable year more than 50% of the value of a Fund’s assets consists of certain foreign stock or securities, each such Fund will be eligible to elect to “pass through” to investors the amount of foreign income and similar taxes (including withholding taxes) paid by such Fund during that taxable year. This means that investors would be considered to have received as additional income their respective shares of such foreign taxes, but may be entitled to either a corresponding tax deduction in calculating taxable income, or, subject to certain limitations, a credit in calculating federal income tax. If a Fund does not so elect, each such Fund will be entitled to claim a deduction for certain foreign taxes incurred by such Fund. A Fund (or a financial intermediary, such as a broker, through which a shareholder owns Shares) will notify you if it makes such an election and provide you with the information necessary to reflect foreign taxes paid on your income tax return.

Foreign tax credits, if any, received by a Fund as a result of an investment in another RIC (including an ETF which is taxable as a RIC) will not be passed through to you unless the Fund qualifies as a “qualified fund-of-funds” under the Code. If a Fund is a “qualified fund-of-funds” it will be eligible to file an election with the IRS that will enable the Fund to pass along these foreign tax credits to its shareholders. A Fund will be treated as a “qualified fund-of-funds” under the Code if at least 50% of the value of the Fund’s total assets (at the close of each quarter of the Fund’s taxable year) is represented by interests in other RICs.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in each Fund. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares. Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. For more information, please see the section entitled “Federal Income Taxes” in the SAI.

DISTRIBUTION

Paralel Distributors LLC (the “Distributor”) serves as the Funds’ principal underwriter. The Distributor is a broker-dealer registered with the SEC. The Distributor distributes Creation Units for the Funds on an agency basis and does not maintain a secondary market in Shares. The Distributor has no role in determining the policies of the Funds or the securities that are purchased or sold by the Funds. The Distributor’s principal address is 1700 Broadway, Suite 1850, Denver, Colorado 80290.

The Board has adopted a Distribution and Service Plan (the “Plan”) pursuant to Rule 12b-1 under the 1940 Act. In accordance with the Plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year for certain distribution-related activities and shareholder services.

No Rule 12b-1 fees are currently paid by the Funds, and there are no plans to impose these fees. However, in the event Rule 12b-1 fees are charged in the future, because the fees are paid out of Fund assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

PREMIUM/DISCOUNT INFORMATION

Information regarding how often each Fund’s Shares traded on the Exchange at a price above (i.e., at a premium) or below (i.e., at a discount) its NAV is available on the Funds’ website at www.cloughetfs.com.

OTHER INFORMATION AND ADDITIONAL NOTICES

Certain Conditions on Shareholder Legal Actions

Pursuant to the Trust’s primary governing document, the Second Amended and Restated Agreement and Declaration of Trust, shareholders wishing to pursue a derivative action (a suit brought by a shareholder on behalf of a Fund) are subject to various conditions including that: (i) the Trustees must have a reasonable amount of time to assess the complaining shareholders’ request for action, (ii) at least 10% of shareholders of the Fund must participate in the action (except with respect to claims arising under federal securities laws), and (iii) complaining shareholders must undertake to pay the expenses of advisers that the Trustees engage in consideration of whether to bring an action in the event the Trustees determine not to bring an action (except with respect to claims arising under federal securities laws).

In addition, shareholders wishing to pursue a derivative action (except with respect to claims arising under federal securities law) must bring the compliant all shareholder legal complaints must be brought in the courts of the Court of Chancery of the State of Delaware, or if such court does not have subject matter jurisdiction, any other court with appropriate subject matter jurisdiction in the State of Delaware. For non-federal securities laws claims, this requirement may be inconvenient for some shareholders and may cause such claims to be made in a less favorable forum than otherwise may have been made.

Additional Notices

Shares are not sponsored, endorsed, or promoted by the Exchange. The Exchange is not responsible for, nor has it participated in the determination of, the timing, prices, or quantities of the Funds' Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of the Funds' Shares in connection with the administration, marketing, or trading of the Funds' Shares.

Without limiting any of the foregoing, in no event shall the Exchange have any liability for any lost profits or indirect, punitive, special, or consequential damages even if notified of the possibility thereof.

FINANCIAL HIGHLIGHTS

The financial highlights table below shows the financial performance information for each Predecessor Fund's five most recent fiscal years (or the life of a Fund, if shorter). Certain information reflects financial results for a single share of a Predecessor Fund. The financial highlights for the periods from each Predecessor Fund's inception to October 31, 2023 represent the periods during which the Predecessor Funds were advised by Changebridge Capital, LLC, which is no longer the adviser to the Predecessor Funds effective August 29, 2023. The total returns in the table represent the rate that you would have earned or lost on an investment in a Predecessor Fund (assuming you reinvested all distributions). The information through October 31, 2024 has been audited by Cohen & Company, Ltd., the independent registered public accounting firm of the Funds, whose report, along with each Predecessor Fund's financial statements, is included in the Predecessor Funds' Annual Report to Shareholders, which is available upon request.
