

This presentation has been prepared by XA Investments LLC ("XAI" or the "Adviser") in conjunction with Octagon Credit Investors, LLC ("Octagon" or the "Sub-adviser") solely for information purposes and is not an offer to sell or the solicitation of an offer to buy an interest in any security. XAI serves as the investment adviser to the Trust and is responsible for overseeing the Trust's overall investment strategy and its implementation. Octagon serves as the investment sub-adviser of the Trust and is responsible for investing the Trust's assets. XAI is affiliated with XMS Capital Partners, LLC, a FINRA member and SIPC member.

Consider the investment objective, risks, charges and expenses of the Trust carefully before investing. An investment in the Trust involves risks and is not appropriate for all investors and is not intended to be a complete investment program. For a summary of the risks associated with an investment in the Trust please see the "XFLT Risk Considerations" beginning on page 42 of this presentation.

The Trust is a diversified, closed-end management investment company with limited history of operation. The Trust began operation on September 27, 2017. Shares of closed-end investment companies frequently trade at a discount from their net asset value. Investors should read XFLT's prospectus and SEC filings (which are publicly available on the EDGAR Database on the SEC website at http://www.sec.gov) carefully before investing in XFLT.

Paralel Distributors LLC

### **General Disclosures**

This presentation is intended to be educational in nature and is not for the purpose of recommending a particular investment. The investments discussed may or may not be suitable for the audience of this presentation. Neither XAI nor Octagon is acting as an adviser to the audience members, and audience members should consult their own investment adviser prior to making investment decisions.

From time to time, the Company may have a registration statement relating to one or more of its securities on file with the Securities and Exchange Commission ("SEC"). Any registration statement that has not yet been declared effective by the SEC, and any prospectus relating thereto, is not complete and may be changed. Any securities that are the subject of such a registration statement may not be sold until the registration statement filed with the SEC is effective.

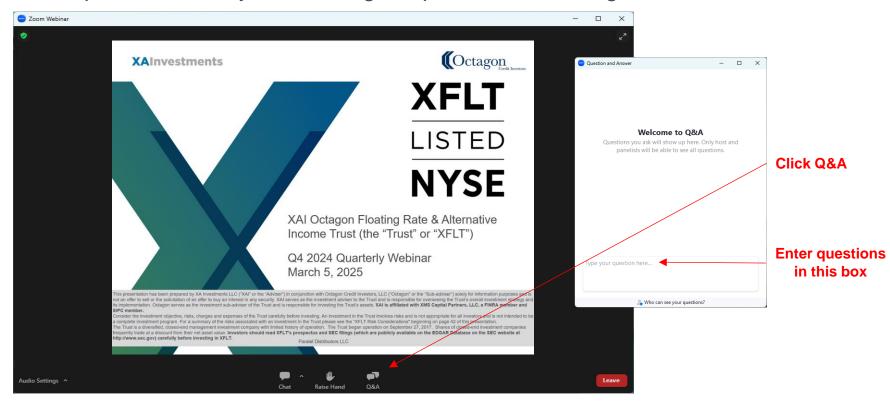

Some information in this presentation reflects proprietary research based upon various data sources. In addition, some information cited in this presentation has been taken from third-party sources that are believed to be reliable but which have not been verified for accuracy or completeness. Neither XAI or Octagon, nor their respective affiliates (collectively, the "Investment Managers"), is responsible for errors or omissions from these sources. No representation is made with respect to the accuracy, completeness or timeliness of information and the Investment Managers assume no obligation to update or otherwise revise such information. The Investment Managers make no representation that the information contained in this presentation is accurate or complete, nor do they review or assume any responsibility for any information received from, or created by, any third parties, including the performance data of indexes and benchmarks. Views expressed herein are subject to change without notice. All data concerning returns and satisfaction of performance tests are historical and based on the Investment Managers' knowledge; as such, they do not represent current performance levels, some or all of which may have changed since the dates referenced herein. This document does not constitute investment, tax, legal, regulatory or accounting advice. Under no circumstances should this document be used or considered as an offer to sell or a solicitation of an offer to buy any security, financial instrument or investment vehicle. Investors are advised to make an independent review regarding the economic benefits and risks of purchasing or selling the financial instruments mentioned in this document and reach their own conclusions regarding the legal, tax, regulatory, accounting and other aspects of any transaction in the financial instrument in relation to their particular circumstances. Investments described herein carry a risk of loss, which could be significant, and that investors should be prepared to bear.

Octagon and/or its affiliated companies may make a market or deal as principal in the financial instruments mentioned in this document or in related securities, options or other derivative instruments based on them. In addition, the Investment Managers, their affiliated companies, shareholders, directors, officers and/or employees, may from time to time have long or short positions in the financial instruments, including loans, securities or in options, futures or other derivative instruments based on them. Performance achieved prior to December 31, 2021 is predominantly based on investments that use USD LIBOR as a reference rate. Overnight and 12-month US dollar LIBOR permanently ceased as of June 30, 2023. 1-, 3-, and 6-month U.S. dollar LIBOR settings will continue to be published using a synthetic methodology until September 2024. As an alternative to LIBOR, the Financial Reporting Council, in conjunction with the Alternative Reference Rates Committee, a steering committee comprised of large U.S. financial institutions, recommended replacing U.S. dollar LIBOR with Secured Overnight Financing Rate ("SOFR"), a new index calculated by reference to short-term repurchase agreements, backed by Treasury securities. There is no guarantee that the performance of individual investments or the syndicated debt and CLO securities markets as a whole during or after the transition period will be consistent with performance achieved during the LIBOR era. Performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted. Similar investments likely would produce different results under different economic and market conditions.

These materials contain forward-looking statements. Investors should not place undue reliance on forward-looking statements. Actual results could differ materially from those referenced in forward-looking statements for many reasons. Forward-looking statements are necessarily speculative in nature, and it can be expected that some or all of the assumptions underlying any forward-looking statements will not materialize or will vary significantly from actual results. Variations of assumptions and results may be material. Without limiting the generality of the foregoing, the inclusion of forward-looking statements herein should not be regarded as a representation by the Investment Managers or any of their respective affiliates or any other person of the results that will actually be achieved by the Trust. None of the foregoing persons has any obligation to update or otherwise revise any forward-looking statements, including any revision to reflect changes in any circumstances arising after the date hereof relating to any assumptions or otherwise.

- Market Outlook

# XFLT Financial Highlights

- XFLT has a fiscal year end of September 30th. Please see XFLT's Annual Report, Semi-annual Report and quarterly financials at www.XAInvestments.com for more details.
- For the three months ended December 31, 2024, net investment income ("NII") was \$0.21.
- In Q1-Q4 2024, XFLT issued 14,238,306 shares of common stock pursuant to the Company's "at-themarket" offering program for total net proceeds of approximately \$99.55mm.
- In Q4 2024, monthly distributions were declared on October 1, November 1, and December 2 in the amounts of \$0.085, \$0.085, and \$0.077, respectively.<sup>1</sup>
- \$805mm in total managed assets as of December 31, 2024, up 48% from \$546mm on January 1, 2024.
- Weighted Average Current Yields and Mark Prices as of 12/31/2024<sup>2</sup>:

CLO Equity	CLO Debt	Loans	Bonds
Current Yield: 21.51%	Current Yield: 11.13%	Current Yield: 8.28%	Current Yield: 6.31%
Mark Price: \$57.34	Mark Price: \$100.00	Mark Price: \$98.40	Mark Price: \$91.26

- Distributions may be comprised of ordinary income, net capital gains, and/or a return of capital (ROC) of your investment in the fund. The actual components of the Trust's distributions for U.S. tax reporting purposes can only be finally determined as of the end of each fiscal year of the Trust and are thereafter reported on Form 1099-DIV. The Trust's distributions for fiscal year ended 2024 comprised 76.3% net investment income and 23.7% return of capital. The Trust's distributions for fiscal year ending 2025 will be made available and reported to investors after the end of fiscal year 2025. A distribution comprised in whole or in part by a return of capital does not necessarily reflect the company's investment performance and should not be confused with "yield" or "income." Future distributions may consist of a return of capital.
- Based on prices sourced by Markit, a third-party pricing service, and are subject to change. Octagon makes no assurances that the prices reflected herein represent the prices at which the Trust's investments will be liquidated. Any fluctuations in market prices may impact Trust returns. Past performance is not necessarily indicative of future results. Current Yield for CLO equity positions is calculated by Octagon as the sum of all cash distributions paid by the CLO within the past 12 months as of the respective date shown (i.e. LTM), divided by the total purchase price or mark price value of the Trust's CLO equity positions as of the respective date. Based on this calculation methodology, the Current Yield of these positions, as included in the calculation of Total Portfolio Current Yield, is zero. Total LTM quarterly cash distributions received by the Fund excludes: i) any CLO Equity positions that have been called; and, ii) any CLO Equity position(s) that did not receive a cash distribution at the CLO's most recent quarterly payment date, however, the purchase cost amount and market value of any such CLO Equity position(s) is reflected in the total purchase cost amount and market value of the Fund's CLO Equity positions used to calculate the Current Yield. As of December 31, 2024, no Fund holdings qualify for this treatment. Total LTM quarterly cash distributions also excludes outsized par flush distributions executed upon a deal's reset or refinancing. These distributions and the Current Yield are subject to change on a prospective basis. Yield is not a projection or guarantee of future returns, due to expected changes in asset prices and changing market factors.

### XFLT Net Returns

### Performance Period Ended Q4 2024

XFLT Net Return Performance assumes dividends are reinvested.

### Broadly Syndicated Loan Market - Conditions & Outlook

#### **Performance**

Loans returned 0.57% in December 2024,1 outpacing HY, IG & 10Y UST bonds for the month, amid firmer growth and a more hawkish Fed4

- Loans produced a historically attractive annual return in 2024 of 8.95%<sup>1</sup>
  - B rated loans outperformed BB and CCC rated loans YTD as of 12/31/2024, led by higher interest return for the B rated cohort<sup>1</sup>
- Loan spreads compressed heading into YE, ending at 341bps (on average) as of 12/31/2024, 28bps lower than YE 2023<sup>5</sup>
- Average loan bid price = 97.33 as of 12/31/2024, vs. 96.23 as of 12/31/2023<sup>1</sup>

#### **Credit Fundamentals**

Earnings trends have been broadly positive for leveraged borrowers with continued EBITDA growth in 3Q246

- LTM loan payment default rate (by par amount, excl. distressed exchanges) decreased to 0.91% as of 12/31/2024, ending the year 62bps lower than YE 20237
- LTM loan dual-track default rate (by issuer count, incl. out-of-court liability management transactions or "LMTs") increased 14bps MoM amid increased restructuring activity to 4.70% as of 12/31/2024, ending 2024 86bps higher than YE 20238

#### **Technicals**

Historically strong 2024 loan issuance was led by record repricing and refinancing activity<sup>5</sup>

- Loans enjoyed robust demand from institutional and retail investors in 2024<sup>5</sup>
- ~82% of the loan market was repriced, paid down, or extended<sup>5</sup>
  - Gross loan supply totaled \$1.4T in 2024 (\$152.9B in December)<sup>5</sup>
  - Net loan supply totaled \$242.3B in 2024 (\$12.7B in December)<sup>5</sup>
- New BSL CLO issuance reached a record \$202.0B in 2024, a 74% YoY increase<sup>5</sup>
- Retail loan fund net inflows totaled \$21.1B in 2024 compared to FY 2023 outflows of -\$17.3B9

#### Outlook

We believe the market environment is constructive for loans given resilient US economic growth, and expectations of gradual rate cuts

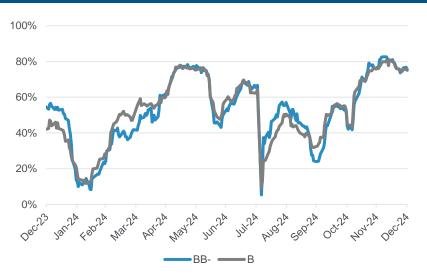

- Several sell-side strategists favor loans over HY bonds, per recent publications
- At 8.55% as of 12/31/2024,3 the average YTM for loans compares favorably to 7.47% YTW for HY bonds as of 12/31/202410

### **CLO Market Commentary**

#### 2024 CLO Market Themes

US CLO debt tranches generated strong returns in 2024

Debt Performance by Asset Class/Tranche (Rating) <sup>1,2</sup>							
	4Q 2024	3Q 2024	2Q 2024	1Q 2024	FY 2024	FY 2023	
CLOIE AAA	1.59%	1.68%	1.77%	1.85%	7.06%	8.68%	
CLOIE AA	1.69%	1.89%	2.03%	2.33%	8.18%	10.86%	
CLOIE A	1.83%	2.11%	2.32%	2.68%	9.25%	13.35%	
CLOIE BBB	2.53%	2.34%	2.94%	3.49%	11.79%	17.66%	
CLOIE BB	4.31%	2.69%	4.52%	6.42%	19.16%	24.52%	
CLOIE B	8.03%	4.01%	9.50%	11.13%	36.72%	26.77%	
Morningstar LSTA LLI	2.27%	2.04%	1.90%	2.46%	8.95%	13.32%	

#### Primary CLO volume hit a record high in 2024, driven by robust investor demand and liability spread tightening across the CLO capital stack

- Gross FY 2024 CLO volume = \$510B, including \$202B of new issue CLOs, \$223B in deal resets, and \$84B of refinancings<sup>3</sup>
  - Record-setting quarterly CLO issuance in 4Q 2024, with \$59.5B of deals priced<sup>3</sup>
  - Deal resets and refinancings accounted for over 60% of total FY 2024 CLO supply<sup>3</sup>
- Primary CLO AAA spreads for top-tier manager deals narrowed to a multi-year tight of S+127bps as of 12/31/2024, and have since tightened further thus far in 20253,4
  - Weighted average cost of capital for US BSL CLOs priced in 4Q was S+170bps (on average), 65bps tighter than 4Q 2023 average (S+235bps)<sup>5</sup>

#### Strong demand for CLOs throughout 2024 from traditional institutional buyers as well as retail investors via the rapidly growing CLO tranche exchangetraded fund (ETF) complex

- CLO ETFs have reported \$15.7B of inflows in 2024, including \$14.1B for investment grade CLO ETFs (focused on AAA-A rated tranches) and \$1.6B for CLO mezzanine ETFs (BBB-BB rated tranches)6
  - Cumulative CLO ETF AUM totals over \$22B as of YE 2024, more than triple the YE 2023 level of ~\$7B7

#### Record gross CLO issuance in 2024 was offset by elevated CLO amortizations and liquidations

- FY 2024 net BSL CLO supply totaled roughly \$34B, while CLO AAA net supply was negative at YE due to elevated amortization and deal call volume<sup>6</sup>
  - Post-RP BSL CLO AAA call / amortizations in 4Q 2024 (~\$24B) decreased from 3Q levels (\$34B)<sup>6</sup>
  - Net CLO supply is expected to increase in 2025 as the balance of post-reinvestment period (RP) deals declines<sup>6,8</sup>

Please refer to the "CLO Market Commentary - Endnotes" section herein for all associated footnotes. Data as of 12/31/2024 unless otherwise noted in Endnotes. Performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted.

# **CLO Market Commentary (cont.)**

### **CLO Portfolio Fundamentals**

#### CLO fundamentals remained relatively stable in 2024

- Median CCC/Caa concentration in reinvesting BSL CLO portfolios was considerably lower at YE 2024 vs. YE 2023, due largely to CCC loan defaults or restructurings, as well as managers actively selling lower-rated assets in advance of resets<sup>7</sup>
  - YE 2024 median S&P CCC/Caa concentration for reinvesting BSL CLOs = 4.7% vs. 6.2% as of YE 2023<sup>7</sup>
    - Median CCC/Caa concentration in post-RP BSL CLOs increased in 2024 vs. 2023 levels, likely attributable to downgrades from B rated loan cohort and prepayments of higher rated loans<sup>6</sup>

#### FY 2024 median equity distribution for reinvesting CLOs was approximately 16% of notional9

- After reaching a multi-year peak in 2Q/April 2024, the median equity distribution for reinvesting CLOs declined moderately QoQ to 3.8% of notional in October 20249
  - We believe continued loan repricing activity is likely to pressure equity distributions in the near-term

#### **Market Technicals**

#### New US CLO formation totaled \$202.0B in FY 2024 (+74% YoY increase) surpassing the previous annual record (\$187B in 20213)

- Middle market/private credit CLOs comprised 19% of 2024 primary deal volume vs. 23% in 2023<sup>10</sup>
- Record CLO resets and refinancings in 2024 (\$306.9B combined total3) as managers sought to lower coupons and extend reinvestment periods
  - Resets and refinancings executed in 2024 allowed CLO managers to reduce liability costs on those deals by 30-80bps<sup>11</sup>

#### Secondary CLO market liquidity remained healthy in 2024, though slightly below 2023's volume<sup>7</sup>

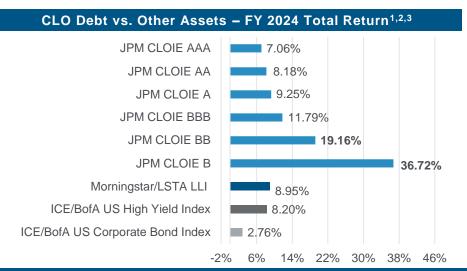

- 4Q 2024 US CLO BWIC volume (\$12.5B traded) was slightly higher than 3Q, amid ongoing elevated CLO reset, refinancing, and paydown activity<sup>7</sup>
- FY 2024 US CLO BWIC volume = \$51.1B vs. \$54.9B in 2023<sup>7</sup>

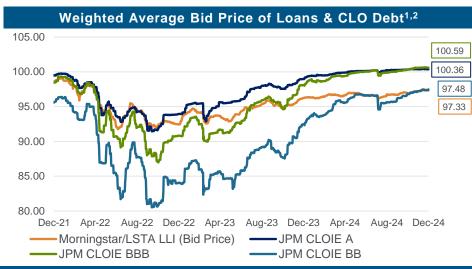

#### 2025 is expected to be another strong year for US CLOs, which we believe reflects investors' increasing acceptance of the CLO asset class

- Sell-side strategist estimates for FY 2025 gross US CLO issuance range from \$160B-\$210B, reflecting lower forecasted CLO reset/refinancing volumes in 2025 following 2024's record activity<sup>12</sup>
- Continued demand for US CLO paper has driven further CLO liability tightening in 1Q 2025 thus far<sup>7</sup>

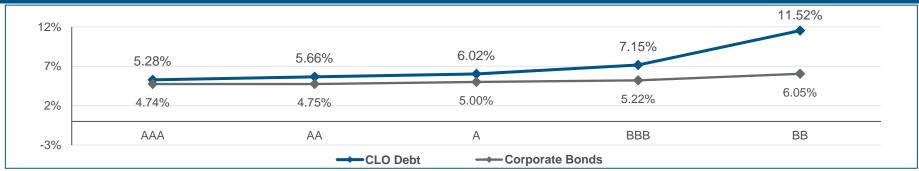

Please refer to the "CLO Market Commentary - Endnotes" section herein for all associated footnotes. Data as of 12/31/2024 unless otherwise noted in Endnotes. Performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted.

### 4Q 2024 CLO Debt Performance

### Comparative Yield of U.S. CLO Debt & Equivalently Rated U.S. Corporate Bonds as of December 31, 2024<sup>1,3</sup>

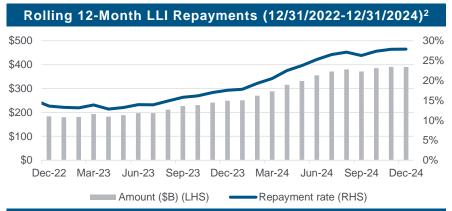

- 1. Source: J.P. Morgan Data Query, as of the stated date. Represents the post-crisis J.P. Morgan Collateralized Loan Obligation Index ("CLOIE"). The CLOIE is a benchmark to track the market for US dollar denominated broadly syndicated, arbitrage CLOs. The CLOIE is divided by origination (pre- versus post-crisis) and is broken out further into six original rating classes (AAA, AA, A, BBB, BB, B). It is impossible to invest directly in the index. Past performance is not a predictor of future market performance.
- 2. Sources: Pitchbook Leveraged Commentary & Data (Pitchbook LCD), Morningstar LSTA Leveraged Loan Index. Represents metrics for the Morningstar LSTA Leveraged Loan Index ("Morningstar LSTA LLI") as of the stated date. In conjunction with LCD, the Leveraged Syndications & Trading Association ("LSTA") developed the Morningstar LSTA LLI, a market-value weighted index designed to measure the performance of the US leveraged loan market, the index universe comprises syndicated, senior secured, US-dollar denominated leveraged loans covered by Morningstar PitchBook/LCD, a Morningstar Company. Loan facilities included in the LLI must have a one year (at inception) minimum term, an initial minimum spread of L/S+125 bps, and a minimum size of \$50mm (initially funded). Refinitiv/LPC Mark-to-Market Pricing is based on bid/ask quotes gathered from dealers and is not based upon derived pricing models. The index uses the average bid for its market value calculation. It is not possible to invest directly in this index. Past performance is not a predictor of future market performance.
- 3. For AAA-BB corporate bonds, yield is represented by the respective portfolio yield by rating as measured by the JPMorgan U.S. Liquid Index ("JULI") investment grade corporate bond index. Includes only securities with maturities of 3-5 years and excludes emerging market bonds. Source: JPMorgan Markets DataQuery (December 31, 2024).

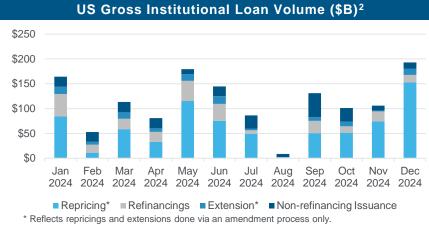

### **Technical Dynamics**

- Record new CLO issuance in 2024 was supportive for the loan market as net loan supply falls short of demand
  - 202B of new CLOs priced in 20241
    - CLO refinancings and resets comprised over 60% of gross FY 2024 issuance, at \$83.6B and \$223.4B, respectively<sup>1</sup>
  - CLO resets and healthy new deal issuance have helped to offset impact from CLOs exiting the reinvestment period
- Loan repricings and refinancings comprised 75% of total gross loan volume<sup>2</sup>
  - Over 50% of all outstanding term loans were repriced in 2024, reducing borrowing spreads by 52bps on average<sup>2</sup>

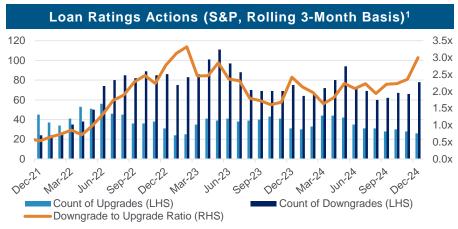

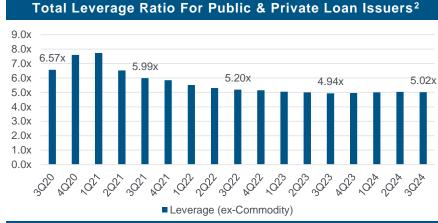

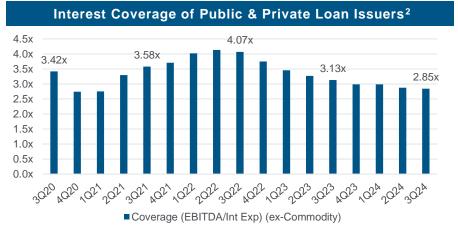

- Source: Pitchbook LCD, LCD Global CLO Databank (December 31, 2024).

<sup>1.</sup> Future common share distributions and amounts will be made if and when declared by the Trust's Board of Trustees, based on a consideration of number of factors. There can be no assurance that the amount or timing of common share distributions in the future will be equal or similar to that described herein or that the Board of Trustees will not decide to suspend or discontinue the payment of common share distributions in the future. Distributions may be comprised of ordinary income, net capital gains, and/or a return of capital (ROC) of your investment in the fund. The actual components of the Trust's distributions for U.S. tax reporting purposes can only be finally determined as of the end of each fiscal year of the Trust and are thereafter reported on Form 1099-DIV. The Trust's distributions for fiscal year ended 2024 comprised 76.3% net investment income and 23.7% return of capital. The Trust's distributions for fiscal year ending 2025 will be made available and reported to investors after the end of fiscal year 2025. A distribution comprised in whole or in part by a return of capital does not necessarily reflect the company's investment performance and should not be confused with "yield" or "income." Future distributions may consist of a return of capital.

- 1. Comps include tickers CCIF, ECC, EIC, OXLC, and OCCI.
- EIC invests in a mix of CLO debt and equity and has a lower management fee than XFLT and does not charge a performance fee.
- OCCI has been omitted from this statistic for not reporting a daily net asset value.
- Source: CEF Connect, Figures represent the latest observable distribution rates. Data as of 12/31/2024.

Distribution rates are not performance and are calculated by summing the monthly distributions per share over twelve months and dividing by the NAV or market price, as applicable, as of the latest month end. Distributions may be comprised of ordinary income, net capital gains, and/or a return of capital (ROC) of your investment in the Trust. The actual components of the Trust's distributions for U.S. tax reporting purposes can only be finally determined as of the end of each fiscal year of the Trust and are thereafter reported on Form 1099-DIV. The Trust's distributions for fiscal year ended 2023 comprised 100% net income and 0.00% return of capital. The Trust's distributions for fiscal year ending 2024 will be made available and reported to investors subsequent to the end of fiscal year 2024. A distribution comprised in whole or in part by a return of capital does not necessarily reflect the company's investment performance and should not be confused with "yield" or "income." Future distributions may consist of a return of capital.

### Credit Stress Indicators<sup>1,2</sup>

<sup>1.</sup> Source: Pitchbook LCD. Represents all loans (excluding defaulted loans) in the Morningstar LSTA LLI marked at an average bid price below 80 or rated CCC or below (December 31, 2024).

<sup>2.</sup> Source: Pitchbook LCD, "LLI Default Rate & Distressed Ratios" (December 31, 2024).

### Historical Loan Yields and Default Rate<sup>1,2,3</sup>

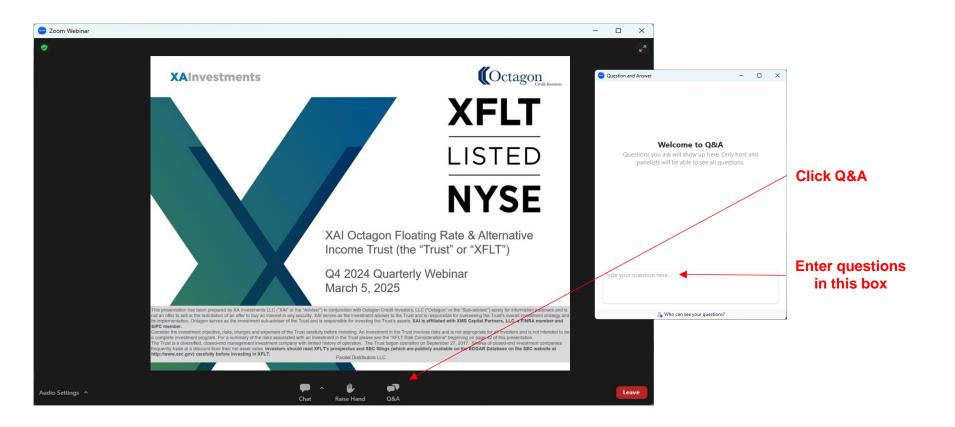

Source: Pitchbook LCD, "December Wrap" (January 2, 2025).

Source: Pitchbook LCD (December 31, 2024). Morningstar LSTA LLI default rate represents lagging 12-month default rate by principal amount as of the respective period. The Morningstar LSTA LLI generally mirrors the universe of leveraged loans syndicated in the US. Defaults for the Morningstar LSTA LLI do not represent the default experience of any particular investment manager or manager peer set. Defaults represent all loans including loans not included in the Refinitiv/LPC mark-to-market service. Default rate is calculated as the amount default over the last 12 months divided by the amount outstanding at the beginning of the 12-month period. Past defaults are not an indication of future default rates.

Represents the average of all outstanding 1- and 3- Month LIBOR/SOFR contracts tracked by Markit.

# XFLT Total Portfolio Holdings and Financials

Full portfolio holdings and financials are available at:

https://xainvestments.com/XFLT

Below Investment Grade Securities Risk. The Trust invests primarily in below investment grade credit instruments, which are commonly referred to as "high-yield" securities or "junk" bonds. S&P uses a scale divided into two categories: The first category, "Investment," includes ratings ranging from AAA to BBB-. It groups together the ratings given to bonds considered financially solid. The second category, "Speculative," ranges from BB+ to D. S&P groups together the ratings given to bonds considered at risk. Moody's also uses a two-scale rating approach for long-term obligations: "Investment Grade" rating range from Aaa to Baa3, while "Non-Investment Grade" rating range from Ba1 to C. Moody's does not rate credit investments below C. A credit instrument is considered below investment grade quality if it is rated below investment grade (that is, below Baa3 by Moody's or below BBB- by S&P or Fitch) or, if unrated, judged to be below investment grade quality by the Sub-Adviser. Below investment grade credit instruments are often referred to as "high yield" securities or "junk bonds." Below investment grade credit instruments are regarded as having predominantly speculative characteristics with respect to capacity to pay interest and to repay principal.

Rating agencies, such as Moody's, S&P or Fitch, are private services that provide ratings of the credit quality of debt obligations. Ratings assigned by a rating agency are not absolute standards of credit quality but represent the opinion of the rating agency as to the quality of the obligation. Rating agencies may fail to make timely changes in credit ratings and an issuer's current financial condition may be better or worse than a rating indicates. To the extent that the issuer of a security pays a rating agency for the analysis of its security, an inherent conflict of interest may exist that could affect the reliability of the rating. Ratings are relative and subjective and, although ratings may be useful in evaluating the safety of interest and principal payments, they do not evaluate the market value risk or liquidity of such obligations. To the extent that the Trust invests in unrated lower grade securities, the Trust's ability to achieve its investment objective will be more dependent on the Sub-Adviser's credit analysis than would be the case when the Trust invests in rated securities.

### CLO Market Commentary – Endnotes

- Source: J.P. Morgan Data Query, as of the stated date. Represents the post-crisis J.P. Morgan Collateralized Loan Obligation Index ("CLOIE"). The CLOIE is a benchmark to track the market for US dollar denominated broadly syndicated, arbitrage CLOs. The CLOIE is divided by origination (pre- versus post-crisis) and is broken out further into six original rating classes (AAA, AA, A, BBB, BB, B). It is impossible to invest directly in the index. Past performance is not a predictor of future market performance.
- Sources: Pitchbook Leveraged Commentary & Data (Pitchbook LCD), Morningstar LSTA Leveraged Loan Index. Represents metrics for the Morningstar LSTA Leveraged Loan Index ("Morningstar LSTA LLI") as of the stated date. In conjunction with LCD, the Leveraged Syndications & Trading Association ("LSTA") developed the Morningstar LSTA LLI, a market-value weighted index designed to measure the performance of the US leveraged loan market, the index universe comprises syndicated, senior secured, US-dollar denominated leveraged loans covered by Morningstar PitchBook/LCD, a Morningstar Company. Loan facilities included in the LLI must have a one year (at inception) minimum term, an initial minimum spread of L/S+125 bps, and a minimum size of \$50mm (initially funded). Refinitiv/LPC Markto-Market Pricing is used to price each loan in the index. Refinitiv/LPC Mark-to-Market Pricing is based on bid/ask guotes gathered from dealers and is not based upon derived pricing models. The index uses the average bid for its market value calculation. It is not possible to invest directly in this index. Past performance is not a predictor of future market performance.

### **Broadly Syndicated Loan Market - Conditions & Outlook - Endnotes**

- Represents metrics for the Morningstar LSTA Leveraged Loan Index ("Morningstar LSTA LLI") as of the stated date.
- "Market" represents the total addressable leveraged loan market; Source; Morningstar LSTA LLI par amount outstanding (December 31, 2024).
- Represents the Yield to Maturity for the Morningstar LSTA LLI (December 31, 2024).
- Senior secured loans are represented by the Morningstar LSTA LLI, high yield bonds are represented by the ICE/BofA US High Yield Bond Index, corporate bonds are represented by ICE/BofA US Corporate Index, and U.S. Treasury Bonds are represented by the ICE BofA Current 10-Year US Treasury Index, Sources: Morningstar/LSTA, Bloomberg, An investment cannot be made directly in an index, Past performance is not a guarantee of future results. Holdings in any relevant index may differ materially from holdings in an Octagon-managed account or fund.
- Source: Pitchbook LCD, "December Wrap" (January 2, 2025).
- Source: J.P. Morgan North America Credit Research: "3Q24 leveraged Loan Credit Fundamentals", Public & Private company metrics, encompasses 289 public companies (which accounts for 99% of the outstanding public loan borrower base) and 444 private companies, excludes commodities for both public and private data. Public financial data is derived from J.P. Morgan high-vield credit analysts and Capital IQ, private financial data is derived from Bixby Research and Analytics Inc.
- Source: Pitchbook LCD (December 31, 2024). Morningstar LSTA LLI default rate represents lagging 12-month default rate by principal amount as of the respective period. The Morningstar LSTA LLI generally mirrors the universe of leveraged loans syndicated in the US. Defaults for the Morningstar LSTA LLI do not represent the default experience of any particular investment manager or manager peer set. Defaults represent all loans including loans not included in the Refinitiv/LPC mark-to-market service. Default rate is calculated as the amount default over the last 12 months divided by the amount outstanding at the beginning of the 12-month period. Past defaults are not an indication of future default rates.
- Source: Pitchbook LCD (December 31, 2024). Morningstar LSTA Leveraged Loan Index legacy default & dual-track default rates represent lagging 12-month ("LTM") rates by issuer count as of the respective period. The Morningstar LSTA LLI generally mirrors the universe of leveraged loans syndicated in the US. Legacy default & dual-track defaults for the Morningstar LSTA LLI do not represent the experience of any particular investment manager or manager peer set. Rates represent all issuers including those with loans not included in the Refinitiv/LPC mark-to-market service. Legacy default and dual-track rates are calculated as the count of issuers meeting the legacy default or dual-track default criteria over the last 12 months divided by the total issuers not in default 12 months ago. Legacy default rates capture bankruptcies, downgrades to D by S&P, and missed interest payments without forbearance; dual-track default rates capture each of the aforementioned criteria as well as liability management transactions considered a distressed exchange or default by S&P Global Ratings.

Represents the ICE BofA US High Yield Index, an index tracking the performance of US dollar denominated below investment grade rated corporate debt publicly issued in the US domestic market. It is impossible to invest directly in the index. Past performance is not a predictor of future market performance.

Additional Information, Glossary and Risk Considerations

### **CLO Considerations**

### Is there a CLO equity benchmark index?

Currently, no CLO equity index exists and none is expected since CLO equity returns differ by vintage (year of issuance), making index creation challenging. As such, there are no historical returns for the CLO equity marketplace. There are two fairly new CLO debt indices (J.P. Morgan CLO Index and Palmer Square CLO Debt Index) which provide historical post-crisis index return information.

### What is XFLT's performance benchmark?

Because there is no CLO equity index, XFLT uses the leading senior loan benchmark which is the Morningstar LSTA 100 Leveraged Loan Index as its performance benchmark.

### What does the life of a typical CLO look like?

Life of the Typ	oical CLO	
Pre-closing	Month 1 to Month 6	Warehouse Period: Underwriting bank provides CLO manager with financing to begin acquiring assets in advance of CLO closing. Equity investors provide first loss capital during the warehouse period.
Closing		CLO comes into legal existence.
Post-closing	Month 1 to Month 3	Ramp-Up Period: Post-closing, proceeds from CLO debt issuance used to repay warehouse and purchase additional assets.
		<u>Non-Call Period:</u> Post-Year 2, the equity investor(s) may direct original CLO liabilities to be refinanced (prepaid at par) and replaced with new liabilities to reduce interest expense.
	Month 4 to Year 4	Reinvestment Period:     Collateral manager permitted to actively trade underlying assets to maximize value and ensure portfolio remains in compliance with collateral quality tests     Principal cash flows from underlying loan/bond assets used by the collateral manager to purchase new assets.
	Year 5 to Maturity	Amortization Period: A portion of cash flows from asset amortization, prepayments/repayments, and sales are used to pay down outstanding CLO debt in order of seniority.
	Year 8	Average Life of a CLO

#### What does it mean to reset or refinance a CLO?

When refinancing a CLO, the CLO capital stack is replaced at lower spreads, which reduces equity-tranche holders' cost of leverage and thus increases their return. The portfolio can be refinanced either partially or in full. In a CLO reset, the original deal, including the loans it owns, remains in place and its reinvestment period or maturity is extended to allow the deal to remain outstanding longer. CLOs typically have a four-year reinvestment and once that timeframe is up, there may be restrictions on buying new loans. A CLO can only be reset or refinanced after its non-call period.

# Glossary

TERM	DEFINITION
Accredited Investor	Generally, anyone who earned income that exceeded \$200,000 (or \$300,000 together with a spouse) in each of the prior two years, and reasonably expects the same for the current year, or has a net worth over \$1 million, either alone or together with a spouse (excluding the value of the person's primary residence).
Alpha	A measure of the excess return of a manager or a fund relative to the return of the benchmark index.
Alternative Investments	Investments in assets other than stocks, bonds and cash or investments using strategies that go beyond traditional ways of investing. Because alternatives tend to behave differently than typical stock and bond investments, adding them to a portfolio may provide broader diversification, reduce risk, and enhance returns.
Barclays Corporate Bond Index	This index measures the investment grade, fixed-rate, taxable corporate bond market. It includes USD denominated securities publicly issued by US and non-US industrial, utility, and financial markets.
Basis Point	A unit of measure used to describe the percentage changes in the value or rate of an instrument. One basis point is equivalent to 0.01%.
BDC (Business Development Company)	A type of closed-end fund that must invest at least 70% of its assets in private or public U.S. firms with market values of less than \$250 million. BDCs may be structured as listed or non-listed funds.
BWIC (Bids Wanted in Competition)	Refers to a type of secondary "auction" of loans of bonds where an institutional investor/security holder offers up a portfolio of securities via a dealer. The dealer will then put out a BWIC, asking potential buyers to submit bids for the securities/portfolio as a whole.
Cash Drag	Uninvested assets in a fund or account are sometimes called cash drag because your cash is not participating in the market and has no upside or downside potential.
CLO (Collateralized Loan Obligation)	A type of structured credit. CLOs invest in a diverse portfolio of broadly syndicated senior secured loans. CLOs finance this pool of loans with a capital structure that consists of debt and equity.
Collateral	A property or other asset that a borrower offers as a way for a lender to secure the loan. If the borrower stops making the promised loan payments, the lender can seize the collateral to recoup its losses.
Correlation	A statistical measure of how two securities move in relation to one another. The correlation coefficient, or indicator of related movement, ranges from 1 to -1.
Duration	A measure expressed in years of the sensitivity of the price of a fixed-income investment to a change in interest rates.
J.P. Morgan Domestic High Yield Index	This index is designed to mirror the investable universe of the U.S. dollar domestic high yield corporate debt market.
J.P. Morgan Collateralized Loan Obligation Index ("CLOIE")	The CLOIE index is a benchmark to track the market for US dollar denominated broadly-syndicated, arbitrage CLOs. The CLOIE is divided by origination (pre- versus post-crisis) and is broken out further into six original rating classes (AAA, AA, A, BBB, BB, B).

# Glossary (cont.)

	,
TERM	DEFINITION
First Lien	A security interest in one or more assets that lenders hold in exchange for secured debt financing. The first lien to be recorded is paid first.
LIBOR	A benchmark rate that some of the world's leading banks charge each other for short-term loans. LIBOR stands for 'London Interbank Offered Rate.'
LIBOR Floor	Ensures that investors receive a guaranteed minimum yield on the loans in which they invest, regardless of how low the LIBOR benchmark rates falls.
LTM (Last Twelve Months)	The timeframe of the immediately preceding 12 months.
Mark-to-Market	A measure of the value of an asset or liability, based on current market price.
MLP (Master Limited Partnership)	A type of publicly-traded limited partnership which must generate 90% of their income from qualifying sources, such as exploration, extraction, refining and transporting oil and alternative fuels.
REIT (Real Estate Investment Trust)	A type of security that invests in real estate through property or mortgages. At least 75% of a REIT's assets must be invested in real estate, cash or U.S. Treasuries and 75% of gross income must be derived from real assets. REITs are structured as listed or non-listed REITs.
S&P 500 Index	The S&P 500 Index is a market-capitalization-weighted index of the 500 largest U.S. publicly traded companies. The index is widely regarded as the best gauge of large-cap U.S. equities.
Morningstar LSTA Leveraged Loan 100 Index	The Morningstar LSTA U.S. Leveraged Loan 100 Index is designed to reflect the performance of the largest facilities in the leveraged loan market.
Second Lien	Debts that are subordinate to the rights of more senior debts (i.e., first lien instruments) issued against the same collateral or portions of the same collateral.
Senior Secured Loans	Debt obligations (also commonly referred to as "senior loans" or "floating rate loans"), issued by a bank to a corporation that holds legal claim to the borrower's assets above all other debt obligations. Senior secured loans have floating rates that typically fluctuate according to the LIBOR.
Sharpe Ratio	Measure of an investment's historical returns adjusted for risk or volatility.
SOFR	The Secured Overnight Financing Rate (SOFR) is a broad measure of the cost of borrowing cash overnight collateralized by Treasury securities.
Standard Deviation	Measures the volatility of an investment return. The larger the standard deviation, the larger the potential movement – up or down – of an investment return.
Tranche	Related securities that are portions of a deal or structured financing, but have different risks, return potential and/or maturities.
Volcker Rule	Prohibits banks from proprietary trading and restricts investment in hedge funds and private equity by commercial banks and their affiliates.
Waterfall	A hierarchy establishing the order in which funds are to be distributed in a CLO.

# XFLT Summary Risks

Investment in the Trust involves special risk considerations, which are summarized below. The Trust is designed as a long-term investment and not as a trading vehicle. The Trust is not intended to be a complete investment program. The Trust's performance and the value of its investments will vary in response to changes in interest rates, inflation and other market factors

Performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted.

For additional risks relating to investments in the Trust, please see "Risks" in the Trust's Annual Report on Form N-CSR, which is publicly available on the EDGAR Database on the SEC website at <a href="http://www.sec.gov">http://www.sec.gov</a>.

Investment in the Trust involves special risk considerations, which are summarized below. The Trust is designed as a long-term investment and not as a trading vehicle. The Trust is not intended to be a complete investment program. The Trust's performance and the value of its investments will vary in response to changes in interest rates, inflation and other market factors. Investors should see the "Risks" section in the Trust's most recent Annual Report on Form N-CSR for a detailed discussion of factors investors should consider carefully before deciding to invest in the Trust's Shares.

Investment and Market Risk. An investment in Common Shares is subject to investment risk, including the possible loss of the entire principal amount that you invest. Your investment in Common Shares represents an indirect investment in the securities owned by the Trust. Your Common Shares at any point in time may be worth less than your original investment, even after taking into account the reinvestment of distributions. A prospective investor should invest in the Common Shares only if the investor can sustain a complete loss in its investment.

Structured Credit Instruments Risk. Holders of structured credit instruments bear risks of the underlying investments, index or reference obligation as well as risks associated with the issuer of the instrument. which is often a special purpose vehicle, and may also be subject to counterparty risk.

Below Investment Grade Securities Risk. The Trust intends to invest primarily in below investment grade credit instruments, which are commonly referred to as "high-yield" securities or "junk" bonds. Investment in securities of below investment grade quality involves substantial risk of loss. Securities of below investment grade quality are considered predominantly speculative with respect to the issuer's capacity to pay interest and repay principal when due and therefore involve a greater risk of default or decline in market value due to adverse economic and issuer-specific developments. Issuers of below investment grade securities are not perceived to be as strong financially as those with higher credit ratings. These issuers face ongoing uncertainties and exposure to adverse business, financial or economic conditions and are more vulnerable to financial setbacks and recession than more creditworthy issuers, which may impair their ability to make interest and principal payments. Securities of below investment grade quality display increased price sensitivity to changing interest rates and to a deteriorating economic environment. The market values of certain below investment grade securities tend to reflect individual issuer developments to a greater extent than do higher-rated securities, which react primarily to fluctuations in the general level of interest rates. The market values for securities of below investment grade quality tend to be more volatile and such securities tend to be less liquid than investment grade debt securities, which could result in the Trust being unable to sell such securities for an extended period of time, if at all. To the extent that a secondary market does exist for certain below investment grade securities, the market for them may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods. Because of the substantial risks associated with investments in below investment grade securities, you could have an increased risk of losing money on your investment in Common Shares, both in the short-term and the long-term. To the extent that the Trust invests in below investment grade securities that are unrated, the Trust's ability to achieve its investment objectives will be more dependent on the Sub-Adviser's credit analysis than would be the case when the Trust invests in rated securities.

Market Discount Risk. Shares of closed-end management investment companies frequently trade at a discount from their net asset value, which is a risk separate and distinct from the risk that the Trust's net asset value could decrease as a result of its investment activities. Although the value of the Trust's net assets is generally considered by market participants in determining whether to purchase or sell Common Shares, whether investors will realize gains or losses upon the sale of Common Shares will depend entirely upon whether the market price of Common Shares at the time of sale is above or below the investor's purchase price for Common Shares. Because the market price of Common Shares will be determined by factors such as net asset value, dividend and distribution levels (which are dependent, in part, on expenses), supply of and demand for Common Shares, stability of dividends or distributions, trading volume of Common Shares, general market and economic conditions and other factors beyond the control of the Trust, the Trust cannot predict whether Common Shares will trade at, below or above net asset value or at, below or above the initial public offering price. This risk may be greater for investors expecting to sell their Common Shares soon after the completion of the public offering, as the net asset value of the Common Shares will be reduced immediately following the offering as a result of the payment of certain offering costs. Common Shares of the Trust are designed primarily for long-term investors; investors in Common Shares should not view the Trust as a vehicle for trading purposes.

CLO Risk. CLOs often involve risks that are different from or more acute than risks associated with other types of credit instruments. For instance, due to their often complicated structures, various CLOs may be difficult to value and may constitute illiquid investments. In addition, there can be no assurance that a liquid market will exist in any CLO when the Trust seeks to sell its interest therein. Moreover, the value of CLOs may decrease if the ratings agencies reviewing such securities revise their ratings criteria and, as a result, lower their original rating of a CLO in which the Trust has invested.

Restructuring of Investments Held by CLOs. The manager of a CLO has broad authority to direct and supervise the investment and reinvestment of the investments held by the CLO, which may include the execution of amendments, waivers, modifications and other changes to the investment documentation in accordance with the collateral management agreement. During periods of economic uncertainty and recession, the incidence of amendments, waivers, modifications and restructurings of investments may increase. Such amendments, waivers, modifications and other restructurings will change the terms of the investments and in some cases may result in the CLO holding assets not meeting its criteria for investments. This could adversely impact the coverage tests under an indenture governing the notes issued by the CLO. If as a result of any such restructurings, the Sub-Adviser determines that continuing to hold instruments issued by such CLO is no longer in the best interest of the Trust, the Sub-Adviser may dispose of such CLO instruments. In certain instances, the Trust may be unable to dispose of such investments at advantageous prices and/or may be required to reinvest the proceeds of such disposition in lower-yielding investments.

CLO Management Risk. The activities of any CLO in which the Trust may invest will generally be directed by a collateral manager. In the Trust's capacity as holder of subordinated notes, the Trust is generally not able to make decisions with respect to the management, disposition or other realization of any investment, or other decisions regarding the business and affairs, of that CLO.

CLO Subordinated Note Risk. The Trust may invest in subordinated notes issued by a CLO, which are junior in priority of payment and are subject to certain payment restrictions generally set forth in an indenture governing the notes. In addition, they generally have only limited voting rights and generally do not benefit from any creditors' rights or ability to exercise remedies under the indenture governing the notes. The subordinated notes are not guaranteed by another party. The subordinated notes are unsecured and rank behind all of the secured creditors, known or unknown, of the issuer, including the holders of the secured notes it has issued. Consequently, to the extent that the value of the issuer's portfolio of loan investments has been reduced as a result of conditions in the credit markets, defaulted loans, capital gains and losses on the underlying assets, prepayment or changes in interest rates, the value of the subordinated notes realized at their redemption could be reduced. Accordingly, the subordinated notes may not be paid in full and may be subject to up to 100% loss. Subordinated notes are subject to greater risk that the senior notes issued by the CLO. CLO subordinated notes do not have a fixed coupon and payments on CLO subordinated notes will be based on the income received from the underlying collateral and the payments made to the secured notes, both of which may be based on floating notes. While payments on CLO subordinated notes will vary, CLO subordinated notes may not offer the same level of protection against changes in interest rates as other floating-rate instruments. Subordinated notes are illiquid investments and subject to extensive transfer restrictions, and no party is under any obligation to make a market for subordinated notes.

Corporate Credit Investments Risk. Corporate debt instruments pay fixed, variable or floating rates of interest. The value of fixed-income securities in which the Trust invests will change in response to fluctuations in interest rates. In addition, the value of certain fixed-income securities can fluctuate in response to perceptions of creditworthiness, political stability or soundness of economic policies. Fixedincome securities are subject to the risk of the issuer's inability to meet principal and interest payments on its obligations (i.e., credit risk) and are subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (i.e., market risk).

Senior Loan Risk. Senior Loans are generally of below investment grade credit quality and are subject to greater risks than investment grade corporate obligations. The prices of these investments may be volatile and will generally fluctuate due to a variety of factors that are inherently difficult to predict, including, but not limited to, changes in interest rates, prevailing credit spreads, general economic conditions, financial market conditions, U.S. and non-U.S. economic or political events, developments or trends in any particular industry, and the financial condition of certain Borrowers,

Second Lien Loans Risk. Second lien loans are secured by liens on the collateral securing the loan that are subordinated to the liens of at least one other class of obligations of the related obligor, and thus, the ability of the Trust to exercise remedies after a second lien loan becomes a defaulted loan is subordinated to, and limited by, the rights of the senior creditors holding such other classes of obligations. In many circumstances, the Trust may be prevented from foreclosing on the collateral securing a second lien loan until the related senior loan is paid in full.

Unsecured Loan Risk. Unsecured loans do not benefit from any security interest in the assets of the Borrower. Liens on such Borrowers' assets, if any, will secure the applicable Borrower's obligations under its outstanding secured indebtedness and may secure certain future indebtedness that is permitted to be incurred by the Borrower under its secured loan agreements. The holders of obligations secured by such liens will generally control the liquidation of, and be entitled to receive proceeds from, any realization of such collateral to repay their obligations in full before unsecured instruments held by the Trust. In addition, the value of such collateral in the event of liquidation will depend on market and economic conditions, the availability of buyers and other factors. There can be no assurance that the proceeds, if any, from sales of such collateral would be sufficient to satisfy the Trust's unsecured obligations after payment in full of all secured loan obligations of the Borrower. If such proceeds were not sufficient to repay the Borrower's outstanding secured loan obligations, then the Trust's unsecured claims against the Borrower would rank equally with the unpaid portion of such secured creditors' claims against the Borrower's remaining assets, if any. As a result, the prices of unsecured loans may be more volatile than those of senior loans, second lien and other secured loans and other investments held by the Trust.

Loan Participation and Assignment Risk. The Trust may purchase Senior Loans, second lien loans and unsecured loans on a direct assignment basis from a participant in the original syndicate of lenders or from subsequent assignees of such interests. The Trust may also purchase, without limitation, participations in Senior Loans, second lien loans and unsecured loans. The purchaser of an assignment typically succeeds to all the rights and obligations of the assigning institution and becomes a lender under the credit agreement with respect to the debt obligation; however, the purchaser's rights can be more restricted than those of the assigning institution, and, in any event, the Trust may not be able to unilaterally enforce all rights and remedies under the loan and with regard to any associated collateral. A participation typically results in a contractual relationship only with the institution participating out the interest, not with the Borrower. In purchasing participations, the Trust generally will have no right to enforce compliance by the Borrower with the terms of the loan agreement against the Borrower, and the Trust may not directly benefit from the collateral supporting the debt obligation in which it has purchased the participation. As a result, the Trust will be exposed to the credit risk of both the Borrower and the institution selling the participation.

Further, in purchasing participations in lending syndicates, the Trust may not be able to conduct the same due diligence on the Borrower with respect to a loan hat the Trust would otherwise conduct. In addition, as a holder of the participations, the Trust may not have voting rights or inspection rights that the Trust would otherwise have if it were investing directly in the loan, which may result in the Trust being exposed to greater credit or fraud risk with respect to the Borrower.

Illiquid Investments Risk. The Trust expects to invest in restricted, as well as thinly traded, instruments and securities (including privately placed securities and instruments, which are assets which are subject to Rule 144A. There may be no trading market for these securities and instruments, and the Trust might only be able to liquidate these positions, if at all, at disadvantageous prices.

Stressed and Distressed Investments Risk. The Trust may invest in stressed and distressed securities. The ability of the Trust to obtain a profit from these investments may often depend upon factors that are intrinsic to the particular issuer, rather than the market as a whole. Appreciation in the value of such securities may be contingent upon the occurrence of certain events, such as a successful reorganization or merger. If the expected event does not occur, the Trust may incur a loss on the position. Distressed securities may have a limited trading market, resulting in limited liquidity and presenting difficulties to the Trust in valuing its positions. Due to the illiquid nature of many distressed investments, as well as the uncertainties of the reorganization and active management process, the Sub-Adviser may be unable to predict with confidence what the exit strategy will ultimately be for any given position, or that one will definitely be available. Certain distressed investment opportunities may allow a holder to have significant influence on the management, operations and strategic direction of the portfolio companies in which it invests.

Leverage Risk. The Trust uses leverage to seek to enhance total return and income. The Trust may use leverage through (i) the issuance of senior securities representing indebtedness, including through borrowing from financial institutions or issuance of debt securities, including notes or commercial paper (collectively, "Indebtedness"), (iii) the issuance of preferred shares ("Preferred Shares") and/or (iii) reverse repurchase agreements, securities lending, short sales or derivatives, such as swaps, futures or forward contracts, that have the effect of leverage ("portfolio leverage"). The Trust may utilize leverage to the maximum extent permitted under the Investment Company Act of 1940.

The Trust has entered into a revolving credit facility and any borrowings through the credit facility are secured by eligible securities held in the Trust's portfolio of investments. The Trust has also issued preferred shares, which are senior securities that constitute shares of beneficial interest of the Trust. Preferred shares rank senior to the Trust's Common Shares in priority of payment of dividends and as to the distribution of assets upon dissolution, liquidation or winding up of the Trust's affairs; equal in priority with all other future series of preferred shares the Trust may issue as to priority of payment of dividends and as to distributions of assets upon dissolution, liquidation or the winding-up of the Trust's affairs; and subordinate in right of payment to amounts owed under the Trust's existing credit facility, and to the holder of any future senior indebtedness, which may be issued without the vote or consent of preferred shareholders. The use of leverage is a speculative technique that involves special risks. The Trust currently anticipates utilizing leverage to seek to enhance total return and income. There can be no assurance that the Advisor's and the Sub-Adviser's expectations will be realized or that a leveraging strategy will be successful in any particular time period. Use of leverage creates an opportunity for increased income and capital appreciation but, at the same time, creates special risks. Leverage is a speculative technique that exposes the Trust to greater risk and increased costs than if it were not implemented. The more leverage that is utilized by the Trust, the more exposed the Trust will be to the risks of leverage. The use of leverage by the Trust causes the net asset value of the common shares to fluctuate significantly in response to changes in interest rates and other economic indicators. As a result, the net asset value, market price and dividend rate of the common shares is likely to be more volatile than those of a fund that is not exposed to leverage. Leverage increases operating costs, which may reduce total return. The Trust pays interest on its borrowings, which may reduce the Trust's return. Increases in interest rates that the Trust must pay on its borrowings will increase the cost of leverage and may reduce the return to common shareholders. The risk of increases in interest rates may be greater in the current market environment because interest rates are near historically low levels. During the time in which the Trust is utilizing leverage, the amount of the investment advisory fee paid by the Trust will be higher than if the Trust did not utilize leverage because the fees paid will be calculated based on the Trust's Managed Assets, including proceeds of leverage. Common shareholders bear the portion of the management fee attributable to assets purchased with the proceeds of leverage, which means that common shareholders effectively bear the entire management fee.

Other Investment Companies Risk. Investments in other investment companies present certain special considerations and risks not present in making direct investments in securities in which the Trust may invest. Investments in other investment companies involve operating expenses and fees that are in addition to the expenses and fees borne by the Trust. Such expenses and fees attributable to the Trust's investments in other investment companies are borne indirectly by Common Shareholders. Accordingly, investment in such entities involves expense and fee layering.

Exchange-Traded Fund Risk. For ETFs tracking an index of securities, the cumulative percentage increase or decrease in the net asset value of the shares of an ETF may over time diverge significantly from the cumulative percentage increase or decrease in the relevant index due to the compounding effect experienced by an ETF which results from a number of factors, including, leverage (if applicable), daily rebalancing, fees, expenses and interest income, which in turn results in greater non-correlation between the return of an ETF and its corresponding index.

Short Sales Risk. Short sales involve selling securities of an issuer short in the expectation of covering the short sale with securities purchased in the open market at a price lower than that received in the short sale. If the price of the issuer's securities declines, the Trust may then cover the short position with securities purchased in the market. The profit realized on a short sale will be the difference between the price received in the sale and the cost of the securities purchased to cover the sale. The possible losses from selling short a security differ from losses that could be incurred from a cash investment in the security; the former may be unlimited, whereas the latter can only equal the total amount of the cash investment. Short selling activities are also subject to restrictions imposed by the federal securities laws and the various national and regional securities exchanges, which restrictions could limit the Trust's investment activities. There can be no assurance that securities necessary to cover a short position will be available for purchase.

Derivatives Risk. Derivatives are financial contracts in which the value depends on, or is derived from, the value of an underlying asset, reference rate or index. The Trust may, but is not required to, engage in various derivatives transactions for hedging and risk management purposes, to facilitate portfolio management and to seek to enhance total return of earn income. The Trust's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives are subject to a number of risks, such as interest rate risk, market risk, counterparty risk, and credit risk.

Off-Exchange Derivatives Risk. The Trust may invest a portion of its assets in investments which are not traded on organized exchanges and as such are not standardized. Such transactions may include forward contracts, swaps or options. While some markets for such derivatives are highly liquid, transactions in off-exchange derivatives may involve greater risk than investing in exchange-traded derivatives because there is no exchange market on which to close out an open position.

Options Risk. Trading in options involves a number of risks. Specific market movements of the option and the instruments underlying an option cannot be predicted. No assurance can be given that a liquid offset market will exist for any particular option or at any particular time. If no liquid offset market exists, the Trust might not be able to effect an offsetting transaction in a particular option.

Futures Risk. Futures contracts markets are highly volatile and are influenced by a variety of factors, including national and international political and economic developments. In addition, because of the low margin deposits normally required in futures trading, a high degree of leverage is typical of a futures trading account. As a result, a relatively small price movement in a futures contract may result in substantial losses to the trader.

Swaps Risk. The Trust may utilize swap agreements including, without limitation, interest rate, index and currency swap agreements. The use of swaps is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary securities transactions. There are risks relating to the financial soundness and creditworthiness of the counterparty to swap agreements.

Credit Default Swaps Risk. The Trust may enter into credit default swap agreements. The "buyer" in a credit default contract is obligated to pay the "seller" a periodic stream of payments over the term of the contract provided that no event of default on an underlying reference obligation has occurred. The Trust may be either the buyer or seller in a credit default swap transaction. Credit default swap transactions involve greater risks than if a Trust had invested in the reference obligation directly. Credit default swaps are subject to the risk of non-performance by the swap counterparty, including risks relating to the financial soundness and creditworthiness of the swap counterparty.

Hedging Transactions Risk. The success of any hedging strategy utilized by the Trust's will be subject to the Sub-Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Trust's hedging strategy will also be subject to the Sub-Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner.

Counterparty Risk. The Trust will be subject to credit risk with respect to the counterparties to the derivative contracts entered into by the Trust.

Synthetic Investment Risk. The Trust may be exposed to certain additional risks should the Sub-Adviser uses derivatives transactions as a means to synthetically implement the Trust's investment strategies. Customized derivative instruments will likely be highly illiquid, and it is possible that the Trust will not be able to terminate such derivative instruments prior to their expiration date or that the penalties associated with such a termination might impact the Trust's performance in a materially adverse manner.

Segregation and Cover Risk. In connection with certain derivatives transactions, the Trust may be required to segregate liquid assets or otherwise cover such transactions and/or to deposit amounts as premiums or to be held in margin accounts. Such amounts may not otherwise be available to the Trust for investment purposes. The Trust may earn a lower return on its portfolio than it might otherwise earn if it did not have to segregate assets in respect of, or otherwise cover, its derivatives transactions positions.

Interest Rate Risk. Interest rate risk is the risk that credit securities will decline in value because of changes in market interest rates. When market interest rates rise, the market value of fixed income credit securities generally will fall. These risks may be greater in the current market environment because while interest rates were historically low in recent years, the Federal Reserve has been increasing the Federal Funds rate to address inflation. Prevailing interest rates may be adversely impacted by market and economic factors. If interest rates rise the markets may experience increased volatility, which may adversely affect the value and/or liquidity of certain of the Trust's investments. The prices of longer-term securities fluctuate more than prices of shorter-term securities as interest rates change. The Trust's use of leverage will tend to increase the interest rate risk to which its Common Shares are subject. The Trust invests primarily in variable and floating rate credit instruments and other structured credit investments, which generally are less sensitive to interest rate changes than fixed rate instruments, but generally will not increase in value if interest rates decline.

Prepayment Risk. The frequency at which prepayments (including voluntary prepayments by the obligors and accelerations due to defaults) occur on bonds and loans will be affected by a variety of factors including the prevailing level of interest rates and spreads as well as economic, demographic, tax, social, legal and other factors. The adverse effects of prepayments may impact the Trust's portfolio in several ways. During periods of declining interest rates, when the issuer of a security exercises its option to prepay principal earlier than scheduled, the Trust may be required to reinvest the proceeds of such prepayment in lower-vielding securities. Particular investments may experience outright losses, as in the case of an interest-only security in an environment of faster actual or anticipated prepayments. In addition, particular investments may underperform relative to hedges that the Sub-Adviser may have constructed for these investments, resulting in a loss to the Trust's overall portfolio.

Inflation/Deflation Risk. Inflation risk is the risk that the value of assets or income from investments will be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Common Shares and distributions can decline. Deflation risk is the risk that prices throughout the economy decline over time — the opposite of inflation. Deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of the Trust's portfolio.

Duration and Maturity Risk. The Trust has no set policy regarding maturity or duration of credit instruments in which it may invest or of the Trust's portfolio generally. The price of fixed rate securities with longer maturities or duration generally is more significantly impacted by changes in interest rates than those of fixed rate securities with shorter maturities or duration. Therefore, generally speaking, the longer the duration of the Trust's portfolio, the more exposure the Trust will have to interest rate risk described above. The Sub-Adviser may seek to adjust the portfolio's duration or maturity based on its assessment of current and projected market conditions and all factors that the Sub-Adviser deems relevant. The Trust may incur costs in seeking to adjust the portfolio average duration or maturity. There can be no assurance that the Sub-Adviser's assessment of current and projected market conditions will be correct or that any strategy to adjust the portfolio's duration or maturity will be successful at any given time.

Credit Risk. Credit risk is the risk that an issuer of securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is less able to pay.

Non-U.S. Investments Risk. The risk of loss associated with investments in securities of foreign issuers include currency exchange risks, expropriation, or limits on repatriating an investment, government intervention, confiscatory taxation, political, economic or social instability, illiquidity, less efficient markets, price volatility and market manipulation.

**Equity Investments Risk.** Incidental to the Trust's investments in credit instruments, the Trust may acquire or hold equity securities, or warrants to purchase equity securities, of a Borrower or issuer. Common equity securities prices fluctuate for a number of reasons, including changes in investors' perceptions of the financial condition of an issuer, the general condition of the relevant stock market and broader domestic and international political and economic events.

Limited Term Risk. Unless the Trust completes an Eligible Tender Offer, and converts to perpetual existence, the Trust will terminate on or about the Termination Date. The Trust should not be confused with a so called "target date" or "life cycle" fund whose asset allocation becomes more conservative over time as the fund's target date, often associated with retirement, approaches, and does not typically terminate on the target date. In addition, the Trust should not be confused with a "target term" fund whose investment objective is to return the fund's original net asset value on the termination date. The Trust's investment objective and policies are not designed to seek to return to investors that purchase Common Shares their initial investment on the Termination Date or in an Eligible Tender Offer, and investors may receive more or less than their original investment upon termination or in an Eligible Tender Offer.

Because the assets of the Trust will be liquidated in connection with the termination, the Trust will incur transaction costs in connection with dispositions of portfolio securities. The Trust does not limit its investments to securities having a maturity date prior to the Termination Date and may be required to sell portfolio securities when it otherwise would not, including at times when market conditions are not favorable, which may cause the Trust to lose money. In particular, the Trust's portfolio may still have significant remaining average maturity and duration, and large exposures to below investment grade securities, as the Termination Date approaches, losses due to portfolio liquidation may be significant. Beginning one year before the Termination Date (the "wind-down period"), the Trust may begin liquidating all or a portion of the Trust's portfolio, and may deviate from its investment policies, including its policy of investing at least 80% of its Managed Assets in floating rate credit instruments and other structured credit investments and may not achieve its investment objective. During the wind-down period, the Trust's portfolio composition may change as more of its portfolio holdings are called or sold and portfolio holdings are disposed of in anticipation of liquidation. Rather than reinvesting the proceeds of matured, called or sold securities, the Trust may invest such proceeds in short-term or other lower yielding securities or hold the proceeds in cash, which may adversely affect its performance. The Trust may distribute the proceeds in one or more liquidating distributions prior to the final liquidation, which may cause fixed expenses to increase when expressed as a percentage of assets under management Upon a termination, it is anticipated that the Trust will have distributed substantially all of its net assets to shareholders, although securities for which no market exists or securities trading at depressed prices, if any, may be placed in a liquidating trust. Common Shareholders will be

If the Trust conducts an Eligible Tender Offer, the Trust anticipates that funds to pay the aggregate purchase price of Common Shares accepted for purchase pursuant to the tender offer will be first derived from any cash on hand and then from the proceeds from the sale of portfolio investments held by the Trust. In addition, the Trust may be required to dispose of portfolio investments in connection with any reduction in the Trust's outstanding leverage necessary in order to maintain the Trust's desired leverage ratios following a tender offer. The disposition of portfolio investments by the Trust could cause market prices of such instruments, and hence the net asset value of the Common Shares, to decline. In addition, disposition of portfolio investments will cause the Trust to incur increased brokerage and related transaction expenses. The Trust may receive proceeds from the disposition of portfolio investments that are less than the valuations of such investments by the Trust. It is likely that during the pendency of a tender offer, and possibly for a time thereafter, the Trust will hold a greater than normal percentage of its total assets in cash and cash equivalents, which may impede the Trust's ability to achieve its investment objective and decrease returns to shareholders. If the Trust's tax basis for the investments sold is less than the sale proceeds, the Trust will recognize capital gains, which the Trust will be required to distribute to shareholders. In addition, the Trust's purchase of tendered Common Shares pursuant to a tender offer will have tax consequences for tendering shareholders and may have tax consequences for non-tendering shareholders. The purchase of Common Shares by the Trust pursuant to a tender offer will have the effect of increasing the proportionate interest in the Trust of non-tendering shareholders. All shareholders remaining after a tender offer will be subject to proportionately higher expenses due to the reduction in the Trust's total assets resulting from payment for the tendered Common Shares. Such reduction in the Trust's total assets may also result in less investment flexibility, reduced diversification and greater volatility for the Trust, and may have an adverse effect on the Trust's investment performance. The Trust is not required to conduct an Eligible Tender Offer, If the Trust conducts an Eligible Tender Offer, there can be no assurance that tendered Common Shares will not exceed the Termination Threshold, in which case the Eligible Tender Offer will be terminated, no Common Shares will be repurchased pursuant to the Eligible Tender Offer and the Trust will terminate on or before the Termination Date (subject to possible extensions). Following the completion of an Eligible Tender Offer in which the tendered Common Shares do not exceed the Termination Threshold, the Board of Trustees may eliminate the Termination Date upon the affirmative vote of a majority of the Board of Trustees and without a shareholder vote. Thereafter, the Trust will have a perpetual existence. The Trust is not required to conduct additional tender offers following an Eligible Tender Offer and conversion to perpetual existence. Therefore, remaining shareholders may not have another opportunity to participate in a tender offer. Shares of closed-end management investment companies frequently trade at a discount from their net asset value, and as a result remaining shareholders may only be able to sell their Common Shares at a discount to net asset value.

LIBOR/SOFR TRANSITION RISK. CLO debt and bank syndicated loans historically used LIBOR as an interest rate benchmark. Overnight and 12-month US dollar LIBOR permanently ceased as of June 30, 2023. 1-, 3-, and 6-month U.S. dollar LIBOR settings will continue to be published using a synthetic methodology until September 2024. As an alternative to LIBOR, the Financial Reporting Council, in conjunction with the Alternative Reference Rates Committee, a steering committee comprised of large U.S. financial institutions, recommended replacing U.S. dollar LIBOR with Secured Overnight Financing Rate ("SOFR"), a new index calculated by reference to short-term repurchase agreements, backed by Treasury securities. There is no guarantee that the performance of individual investments or the syndicated loan and CLO securities markets as a whole during or after the transition period will be consistent with performance achieved during the LIBOR era. Neither the effect of the LIBOR transition process nor its ultimate success can yet be known, and the transition process might lead to increased volatility and illiquidity in markets for, and reduce the effectiveness of, new hedges placed against instruments whose terms currently include LIBOR.

Additional Risks. For additional risks relating to investments in the Trust, please see "Risks" in the Trust's Annual Report on Form N-CSR, which is publicly available on the EDGAR Database on the SEC website at http://www.sec.gov.
